The MANAGER, The Civil and Military Gazette, Ltd., Edwardes Road, Rawalpindi.

The PROPRIETOR, Doaba House, Mohan Lal Road, Lahore.

The PROPRIETOR, The English Book Depôt, Wazir Ali Buildings, Ferozepore.

PREFACE.

According to the provisions of paragraph 4 (4) of letter No. 670, dated the 8th of May 1903, from the Judicial and General Secretary to Government, Punjab, to all Deputy Commissioners in the Punjab, it is necessary for a brief account of the settlement operations and of the changes which they have produced or disclosed in the state of affairs described by Mr. Leigh in his gazetteer of 1917 to be prepared for inclusion in the B Volume of the District Gazetteer with the ordinary statistics of the district.

Although no great extension of cultivation has taken place since the preparation of the last edition of the gazetteer, a good many important changes have taken place in the district and it is necessary that these should be briefly indicated. For convenience of reference the method of description adopted is that observed in Mr. Leigh's Gazetteer, to which the present note will form an appendix.

26th January 1932. A. C. MACNABB.

CHAPTER II.—ECONOMIC—(CONCLUDED).

CHAPTER III.—ADMINISTRATIVE.—(CONCLUDED).

CHAP. I, A. Physical. Water-supplies in the Mohar and the Salt Range (page 10)—*concld.*

villages of Katha Saghral and Katha Misral, will be more difficult to deal with, since numerous persons lay claim to rights in the water and these claims will have to be considered. Further up in the same stream a possibility has been investigated of diverting the stream near Bhinakha in order to irrigate some fertile land in the village of Jhunga Silo instead of allowing the water to run to waste down its present rocky bed. As compared with the larger irrigation and water-supply projects in the plains of the Punjab, these schemes are of minor importance, but they would be of inestimable benefit to the inhabitants of the Salt Range and of the villages at the foot of the hills, and most of them could be carried out with a comparatively small outlay. In many places the carrying of the streams over the beds of salt marl would yield a handsome return on the money invested, since the water supplies could be sold for at least Rs. 2,000 a year for each cusec. The main difficulty in such cases would be in acquiring rights in the water, where such rights exist, and in arranging for a just and equitable distribution of the water among the numerous persons who would come forward to claim it: Such difficulties, however, if resolutely tackled, would not prove insuperable, and it is to be hoped that in the course of time steps will be taken to continue and extend on a large scale the work initiated by King Sher Shah Suri, Lieutenant-Colonel Corbyn and His Excellency Sir Malcolm Hailey.

It must also be remembered that many thousands of tons of salts are carried every year by the streams which issue from the Salt Range and pass through the strata of salt marl at the foot of the Salt Range. This salt is washed into the plains at the foot of the hills, and is causing steady deterioration. Comparatively little damage is done by floods, since the flood water passes too quickly over the soil to leach out much of the salt in it. But the steady flow of the hill streams is undoubtedly causing a great deal of damage.

Floods (page 30).

The record floods of 1893 in the Jhelum and Chenab rivers with discharges of 575,000 cusecs and 700,000 cusecs have recently been surpassed in the River Jhelum first by the floods of August 1928, which amounted to 601,000 and 686,000 cusecs and subsequently of the floods of September 1929, which amounted to 760,000 and 660,000 cusecs at Mangla and Marala Heads, respectively. In spite of the improved methods of giving warnings to the inhabitants of land likely to be inundated, the latter floods caused great damage to crops, houses and cattle. The weir at Rasul was breached and the supplies of canal water during the autumn of 1929-30 were very much reduced.

Section B.—History.

A small shrine, not unlike the smaller of the two shrines of Amb, standing about 1½ miles to the north-west of Kathwai in the Salt Range, has been notified as a protected monument. CHAP. I, B. Other ruins in the Salt Range (page 31).

Various stone platforms, near the lake of Khabakki and elsewhere, were visited during the summer of 1927 by the Archæological Department but without important results. Among other remains, which are of interest in the Salt Range, is the ancient road, hewn out of the rock, which runs above the stream, flowing from Kalial village to Sodhi Jaiwali. According to tradition there was a large town on the low hill to the west of this stream, where it enters the plain near Sodhi Jaiwali. No trace of this town remains and the stones of its buildings are said to have been carried across the valley in order to provide building material for the village of Sodhi Jaiwali. Another interesting relic is a cut on the road between Patlahi and Pail. This cut has the appearance of an irrigation canal but tradition does not relate by whom it was constructed.

Near Naushahra, on the lower slopes of the Patiala hill, there are some remains of what appears at one time to have been a drinking and bathing place. There is still a perennial supply of water at this spot and proposals have been made to utilise it for a supply of water to the town of Naushahra.

In 1924 five gold coins in excellent state of preservation, dating from the reign of Kushan were found near the colossal mound of Panj Pir, which would probably yield more results to archæological excavations than any other site in the district. Old times (page 33).

The most important recent events in the history of the district since 1914 are the following -:— Recent history of the district (page 49).

The great war	1914-18
The completion of direct communication by road between Sargodha and Lahore with the opening of the Chenab boat-bridge at Talibwala	1928
The building of the hill road from Nurewala to Kathwai, which opened up the Salt Range	1928
The construction of the railways from Chiniot to Handewali and from Sargodha to Shahpur	1929

The completion of railway communication between Lahore *via* Chak Jhumra and Khushab by the construction of bridge over the Chenab at Chioniot and over the Jhelum at Khushab is expected to take place in the year 1932. The bridge over the Jhelum was opened in April 1931.

CHAP. I, B.

History.

Recent history of the district (page 49)—*Field.*

Mr. Leigh's Gazetteer was written in the middle of the great war but includes no mention of it. A full account will be found in Mr. Leigh's War History of Shahpur District. At first recruiting was confined to those tribes who had been accustomed to supply soldiers to the regular army. The Jhelum riverain, the Salt Range and the Mohar had already, at the outbreak of the war, considerable numbers of men serving in the combatant ranks of the army. By far the heaviest casualties occurred among men from the Salt Range and from the villages as Hadali and Mitha Tiwana in the Mohar. These tracts also obtained by far the largest share of the rewards given for services in the field.

Subsequently recruiting was taken up with great vigour and large numbers of recruits were obtained from those areas which were already accustomed to send soldiers to the regular army. In Sargodha and Bhalwal Tahsils recruiting was principally for camel drivers and other non-combatants. At the end of the war the district had altogether about 12,000 men in the army. But far the largest number of recruits was supplied by the Awans with altogether 3,404, the Khokhars with 636, the Bilochis with 564 and the Tiwanas with 301. The last named had the highest percentage of 13 recruits to the total of the male population, being followed by the Awans with 10 per cent. At the conclusion of the war many villages, specially in the Mohar and the Salt Range, received remissions of land revenue for various periods in recognition of their services in the war. The services of the Salt Range were also recognised by a grant from the Punjab Government of one-half of the cost of the hill road from Khushab to Kathwai, instead of the ordinary 25 per cent. contribution made by Government to the District Board for similar works in other parts of the district.

The Mardwal riot.

The general enthusiasm, which prevailed throughout the district, was not, however, entirely unanimous. Threats of trouble occurred in 1915 at the time of the riots in Muzaffargarh District, but, owing to the influence of the Pirs of Jahanaian Shah, the leading residents of the southern border of Shahpur District, no untoward event occurred. Later on at the beginning of 1918 the isolated and turbulent village of Mardwal, in the Salt Range, opposed the efforts of the authorities to encourage recruiting. In the month of January 1918, a Sub-Inspector of Police attempted to arrest some of the malcontents, who were preaching the defiance against the administration. He was shut up in a house and only rescued with difficulty when the wilder spirits in the village would have burnt him alive.

CHAP. I.

History.

The Mardwal riot—concld.

Subsequently when Mr. Gibson, Deputy Commissioner, visited the village, the villagers were prepared to attack him, but wiser counsels prevailed, and eventually considerable numbers of recruits from the village joined the army. It was found necessary, however, to locate a punitive police post in the village for some years, until in 1927 the inhabitants of the village contributed to the construction of the arterial road from Naushahra to Khabakki in honour of His Excellency Sir Malcolm Hailey's visit to the Salt Range. Since then the village, except for one murder, has retrieved its evil reputation of former days.

The Lak riot.

Shortly afterwards, in consequence of attempts to encourage recruiting in the Jangli villages to the north of Sargodha, trouble arose in the village of Lak and in February 1918 an attempt was made by the villagers to assault the Commissioner Lieutenant-Colonel Sir Frank Popham Young. There was widespread sympathy for the malcontents throughout the old proprietary villages of Sargodha and Bhalwal Tahsils ; but owing to energetic action on the part of the local authorities, and the timely support of many leading residents of Shahpur Tahsil and various retired military officers from the colony, the conflagration was soon extinguished.

The Bahk Lurka riot.

Not long afterwards, however, trouble again broke out in connection with the efforts to obtain recruits among the Jangli villages of the Chenab riverain portion of Bhalwal Tahsil. At the village of Bahk Lurka on July 28th, 1918, the Tahsildar of Bhalwal, Sayed Nadir Husain Shah, when entering the village, was attacked and cut to pieces. The Sarbarah Zaildar of the village Hassan Muhammad rode out to inform the Revenue Assistant, who was at Ghullapur, not far off. The latter sent word to Mr. Gibson, the Deputy Commissioner, and both proceeded to the village of Bahk Lurka, which they found deserted by practically all of its male inhabitants. The conduct of the Zaildar excited suspicion, and he was arrested. Shortly afterwards the remains of the Tahsildar were found tied up in a sack , which had been dropped into a ravine not far from the village. A Lambardar of the village, who had been shot in the struggle by the Tahsildar, was arrested from the village, where he was in hiding. Fortunately no further attacks were made on officials, but the whole countryside was in strong sympathy with the rioters, and it was not until many weeks had elapsed that some of the absconders were caught. A special tribunal was then constituted under the Defence of India Act and the large number of persons implicated were tried with the result that in this and subsequent judicial proceedings 3 persons were hanged

CHAP. I, B.
History.
The Bahk urka riot—concld.

including the Sarbarah Zaildar and the Lambardar, 5 were sentenced to transportation for life, 9 to various minor punishments, 20 were acquitted, one died and 8 remained absconding, including a Zaildar who had been dismissed for incompetence and for failing to help in recruiting shortly before the riot. These absconders came in druing 1924 and 1925, but had to be discharged, since no one was prepared to give evidence against them.

Political agitation.

As soon as the war was over, attempts were made to excite disaffection in the district, more especially by means of working on the sympatheis of Musalmans for the old regime in Turkey. The Khilafat movement found its chief support in the Salt Range where the isolated and backward villages of Mardwal and Uchhala gave a good deal of trouble. The staunchness, however, of the Zaildars and other leaders of the public opinion in the Salt Range prevented any serious outburst of public feeling, until the Khilafat bubble was finally pricked by the action of the Turks themselves in disowning the Khilafat movement. In the village of Uchhala itself the family, which had taken the leading part in agitation on behalf of what men believed to be the aspirations of the Turks, distinguished itself in 1924 by assisting to capture the Bhukki dacoits and their helpers and in 1927 by presenting to the District Board some valuable land, which made it possible to provide an easy line of communication between Khura on the south and the main road between Naushahra and Sodhi Jaiwali on the north, in the place of a rocky track which had in the past proved an insuperable obstacle to the extension of reasonably good communications towards the centre of the Salt Range. An attempt was made in December 1924 by Maulvi Zahur Ahmad of Bhera to work upon the religious feelings of the inhabitants of the Salt Range at Surakki village, which had one of the best recruiting records during the war. He attempted to persuade the people to demolish the memorial stone placed by the Punjab Government in the village to commemorate its war services. He was, however, stoutly opposed by the aged Lambardar of the village Ali Muhammad, assisted by his son Sahib Khan who was on leave from his regiment at the time. A riot nearly ensued , but was averted by the influence of the acting Zaildar Risaldar Sajawal Khan of Kufri. Maulvi Zahur Ahmad was bound down to be of good behaviour and the incident thus terminated. The family of the Lambardar was rewarded by the allotment of a vacant horse-breeding grant of two squares in the Lower Jhelum Canal Colony.

History. Congress agitation.

During the troubles in 1919 at Amritsar, Gujranwala and elsewhere the district remained quiet. Subsequently agitators began to visit Sargodha from time to time, and efforts were made by various members of the Bar to encourage disaffection, partly in connection with the general Khilafat agitation, which was going on at the time, but more particularly in order to assist the meetings of the Congress elsewhere in the Province. The wiser heads in the district, however, remained aloof from these movements, and the influence of Tiwana Maliks, and other leading residents, was so strong that, except in Sargodha and a few other towns, the district remained on the whole unaffected. Even in Sargodha, where at one time *Hartals* were attempted with considerable prospects of success, the courageous action of Shaikh Daswandhi, a Municipal Commissioner, who was made lambardar of the civil station in recognition of his services in keeping his shops opened and preventing the *Hartals* from becoming complete, rendered the whole agitation abortive.

Akali agitation.

Meanwhile the Akali movement had been growing in strength. Large numbers of Sikhs left the colony chaks of Sargodha Tahsil and proceeded to Nabha State and to Jaito. The more influential Sikhs, who were chiefly retired military officers, found it difficult to withstand the strong feeling, which existed among their community, that their religion was in danger. It became necessary to take action under the preventive sections of the Criminal Procedure Code against certain Sikhs who had made violent speeches. Eventually a horse-breeding Sikh grantee died leaving as his heir his eldest son, who had fallen into the trouble at Jaito. The son was found unfit to succeed to the horse-breeding grant and was passed over in favour of the grandson of the deceased. This aroused the Sikh colonists to a realisation of the serious consequences which might result from participation in the agitation against Government. Finally in the spring of 1925 a Jatha, which was marching through the district, became infected with cholera at Bhalwal, and found the disease spreading rapidly when it reached Shahpur. After several fatalities the Jatha brought forty sick in lorries to Sargodha, where they applied to the civil authorities for help. The whole Jatha was segregated in the almost completed new civil hospital for several weeks until, except for one fatal case, all had recovered. The gratitude, felt by the Sikhs generally for the help given by the authorities to the sick, effectually put an end to the agitation among the Sikhs in the district.

Section C.—Population.

CHAP. I, C.

Leading Families. The Tiwanas of Mitha Tiwana (page 107).

Malik Muzaffar Khan died in 1925 and was succeeded by his only son Malik Ahmad Yar Khan, who served as a Jemadar in the 17th Lancers during the war.

Malik Umar Hayat Khan was promoted in 1920 to the rank of Honorary Lieutenant-Colonel and in 1930 of Colonel in the army. He was awarded the distinction of a K.C.I.E. in the year 1916 and was for some time a Member of the Council of State. He is now a Member of the Secretary of States' Council for India in London. He received the title of Nawab as a personal distinction in the year 1924 and as a hereditary distinction in the year 1929.

Malik Khuda Bakhsh Khan received the distinction of a K.C.I.E. in 1923. He died in 1930, and was succeeded by his only son Khan Bahadur Malik Allah Bakhsh Khan, M.B.E., who is a member of the Legislative Assembly.

The Tiwanas of Hadali (page 111).

Honorary Captain Malik Mubariz Khan, Mundyal Tiwana, died in 1923, and was succeeded by his brother Captain Mumtaz Muhammad Khan. He also succeeded to his brother's seat in Provincial Darbar.

The Noon Family (page 113).

Malik Muhammad Hayat Khan received the title of Nawab as a personal distinction in the year 1923. His son Malik Firoz Khan has for some time been a Member of the Legislative Council, and was appointed Minister for Local Self-Government in the year 1927.

The Biloch Family of Sahiwal (page 114).

Sardar Charagh Khan died in the year 1916. His son Sardar Abdur Rahman Khan served as a Jemadar during the war. The family have now recovered from their previous indebtedness, and their seat in Provincial Darbar was restored to them in the year 1927. His uncle Sardar Fateh Khan has for some years been a Member of the Bench of Honorary Magistrates at Sahiwal.

The Biloch Family of Khushab (page 114).

Sardar Bahadur Khan died in the year 1917 and was succeeded by his son Sardar Muhammad Amir Khan, who succeeded to his father's seat in Divisional Darbar. He is a member of the Bench of Honorary Magistrates at Khushab.

The Diwan Family of Bhera (page 115).

Diwan Jawahir Mal died in the year 1916. Diwan Des Raj has succeeded to his seat in Provincial Darbar. Rai Sahib Lala Ram Das died in the year 1924. Diwan Bahadur Diwan Daulat Rai has succeeded to a seat in Divisional Durbar.

CHAP. I, C.

Population.

Awan families (page 115).

Malik Karam Ilahi, Zaildar of Uchhali, the representative of the only family of Awans in the district, mentioned in the 1st edition of the Punjab Chiefs, was given a seat in Divisional Darbar in the year 1927 for services in connection with the arrest of the Bhukhi dacoits.

Malik Muzaffar Khan, Zaildar of Khabakki, received the same distinction at the same time for the same services.

Malik Sultan Ahmad, Zaildar of Kund, died in 1927 and has been succeeded by his nephew Muhammad Khan.

Malik Fateh Khan of Kandan died in the year 1924.

Ecclesiastical Administration (page 132).

St. Fillan's Church at Sargodha was designed and built by the District Engineer, Major Whitburn, in 1927. It has seating for a congregation of 80 and was erected at a cost of Rs. 11,523 including the purchase of the site, as compared with Rs. 5,953, the cost of St. Andrew's Church at Shahpur, which was built by Sir Donald Macnabb, then Deputy Commissioner of the district, in 1860-61. St. Fillan's Church was consecrated by the Bishop of Lahore on January the 1st, 1928. St. Andrew's Church at Shahpur is maintained by the Public Works Department, to which St. Fillan's Church will also be handed over in the near future.

A church has also recently been built at Sargodha by the American Presbyterian Mission.

CHAPTER II.—ECONOMIC.

Section A.—Agriculture and Irrigation.

CHAP. II, A.

The Sargodha Seed Farm (page 166).

The Sargodha Seed Farm with an area of 155 acres will eventually be absorbed by the extensions of Sargodha City. In its place an experimental farm has been established in Chaks 38 and 39-N.B. about 5 miles north of Sargodha, with an area of 500 acres.

Other agricultural developments (page 67).

Successful experiments have also been made by the District Board with regard to the experimental cultivation of fruit trees, especially in the Salt Range and at Nikki Niwan near Dharema on the road from Sargodha to Shahpur.

It has been discovered that potatoes can be grown all the year round in the Salt Range and an important future should be assured for this crop when large quantities of patato-seed can be harvested in the middle of summer and kept so as to be ready to germinate when sown in the plains at the beginning of cold weather, since the difficulty found with the ordinary potato-seed, obtained from the Simla Hills, is that the crop is harvested in September and has to be kept for about three months until it is ready to germinate with the result that the crop cannot be sown until November, and thus a considerable part of the cold weather growing season is lost. Experiments with improved plums, peaches, and even with grape-fruit trees, have been successfully carried out in the Salt Range, and walnut trees, which have been introduced, have shown that they can thrive. Now that communications, between the Shahpur Salt Range and the rest of the province, have been opened up, the Salt Range should have a future as a gardening and fruit planting area. It is a notable fact that asparagus grows wild in the Salt Range, and, when this vegetable has become more popular in the Punjab, large quantities could be exported to important commercial centres like Lahore and Amritsar.

Sargodha is now the headquarters of an Extra Assistant Director of Agriculture.

Sargodha is now the headquarters of a Deputy Registrar as well as of an Assistant Registrar.

Co-operative and Credit Societies (page 168).

The Sargodha Central Co-operative Bank has now a working capital of about Rs. 20,09,922 . A Central Bank has also been started at Bhalwal in place of the old Bhalwal Co-operative Union. At Shahpur there is a Mortgage Bank, and another has recently been started at Bhalwal. An Inspector of the Co-operative Department is now posted to each Tahsil in the District.

Veterinary administration (page 183).

There are now veterinary hospitals at Sargodha, Bhagtanwala, Bhalwal, Kotmoman, Bhera, Shahpur, Sahiwal, Wadhi, Khushab, Naushahra and Mela.

Horses and ponies (page 184).

A list of officers of the Remount Department in charge of the Shahpur Area and the Shahpur Remount Depôt will be found in an appendix to this volume in which names are given of all those who held charge from the foundation of the colony up till the present time. In the same table are shown numbers of young stock purchased in each financial year by the Army Remount Department from the horse-breeders in the Shahpur Area.

The total number of mares maintained in grants held on horse-breeding conditions is as follows :—

	Mares.
Safedposh grantees holding 1½ squares for each mare maintained	502
Peasant grantees holding 2, or, in the case of superior land allotted in the very early days of the colony, holding 1½ squares for each mare	3,551
Total ..	4,053

The following horse-breeding grantees are bound to maintain ten or more mares on land which they hold on horse-breeding conditions :—

Name of grantee.	*Number of mares.*
(1) Captain Malik Khizar Hayat Khan	47*
(2) Khan Bahadur Malik Allah Bakhsh Khan.. ..	25
(3) Agha Wusat Ali Khan	20
(4) Raja Rahimullah Khan	25
(5) Malik Ahmad Yar Khan	20
(6) Nawab Habib Ullah Khan	30
Total ..	167

Rule of primogeniture.

Originally considerable difficulty was experienced in obtaining grantees who could provide mares suitable for horse-breeding for Army remounts purposes. Some well-to-do proprietors of land, who were offered grants, refused to accept these grants thinking that expense of purchasing and maintaining the full number of mares would exceed the income from the land which

* Excluding one mare for a grant of 1½ squares of land purchased by the previous holder, Sir Umar Hyat Khan, and entered in his wife's name.

CHAP. II, A.

Agriculture and Irrigation.

Rule of primogeniture *contd.*

they would hold on horse-breeding conditions. These expectations, however, were falsified and experience has shown that an area of about 3 killas or a little more than 3 acres, out of each grant of 1½ or 2 squares allotted for the maintenance of mares and young stock, is sufficient for this purpose. The result has been that horse-breeding grantees, holding with the rule of primogeniture, are in a very strong position. Even the peasant grantees, if they are prepared to reside on, and cultivate, the land themselves, are assured of an income ample to support themselves and their families in comfort. Consequently in horse-breeding chaks the standard of living is probably higher than anywhere else in the Punjab. The only real grievance, which exists, is against the rule of primogeniture. This rule is inevitable, since the mare must be maintained by one person responsible for her upkeep, and, if the subdivision of any grant were allowed among many sons, the area, remaining with the son responsible for the upkeep of the mare, would be insufficient. On numerous occasions agitaton has been set on foot against the condition of primogeniture but the Punjab Government has repeatedly refused to abolish this condition. One point to be noticed is that almost all the horse-breeding peasant colonists in Shahpur District own land in their old districts, and this land is divided up among younger sons in accordance with the provisions of Customary Law. A thrifty peasant grantee is also ordinarily able to save enough money during his lifetime to set up at least one younger son for life, by the purchase of some horse-breeding grant which a grantee in the district wishes to dispose of by sale.

The enforcement of conditions has always proved somewhat difficult. For this two factors are responsible. According to the conditions, on which the land is held, a horse-breeding tenant has a right of occupancy and cannot be evicted from his grant, unless it can be found under section 24 of the Colonization of Government Lands Act that he has committed a breach of the conditions of his grant. In the Montgomery Area the horse-breeding rectangle is held on a ten years' lease and apart from the possibility of forfeiture at any time under section 24 of the Colonization of Government Lands Act, the land has to be surrendered at the end of ten years and the grantee in possession has to face competition on the part of other colonists, who are anxious to obtain the land, and may be put in possession by the Collector, if the existing horse-breeding tenant has not satisfactorily fulfilled his obligations. The second difficulty is due to the fact that many horse-breeding grantees in Shahpur District are persons of considerable standing and political and social importance.

It is not easy to deal strictly with such persons, when, as frequently happens, they do not comply with the conditions on which they hold their grants of land. It has always been notorious that Safedposh grantees, as a class, are far less successful as horse-breeders than peasant grantees. If a peasant grantee has to be taken to task for a breach of the conditions of his grant, it is easy for him to point to the fact that larger holders of horse-breeding grants have disregarded their conditions to the same extent as he has, without suffering the punishment proposed to be inflicted in his case.

In the early days of the colony certain large grants were forfeited outright on account of the failure of the grantees to provide the proper number of mares when called upon to do so. After that grants of land for the maintenance altogether of 47 mares including 39 peasant grants were forfeited up to the year 1915 for definite breaches of conditions, after the grantees had been in possession for several years. The enforcement of horse-breeding conditions in Shahpur District has been attended with far more difficulty than in the Lower Bari Doab Canal Colony in Montgomery and Multan Districts.

As a consequence of the rule of primogeniture disputes frequently arise as to succession. The condition laid down by Government in clause 2 of the schedule, attached to the Sanad of Occupancy Rights for horse-breeding tenants, is that the whole grant must devolve as an impartible holding upon a single person. Each successor to the tenancy must be approved and accepted as such by the Deputy Commissioner, and, if he sets aside the next heir according to the rule of primogeniture, he must similarly consider the claims of the heir, next to the person passed over, in order of primogeniture. Cases of succession have to be decided by the Deputy Commissioner at the time when the succession to the grant is open, that is to say, after the decease of the previous holder. It is thus impossible for any horse-breeding grantee to bind the Deputy Commissioner to appoint a certain person other than the eldest son as the successor to the grant, and all wills, purporting to do this, are invalid.

Another way in which horse-breeding grantees sometimes attempt to defeat the right of succession of their eldest son is by making a gift to a younger son or to some other person. Under section 19 of the Colonization Act such gifts require the written sanction of the Commissioner or some person invested with the powers of Commissioner under this section by a written order of the Commissioner. The salutary practice at present in force

CHAP. II, A. Agriculture and Irrigation. Rule of primogeniture—*concld.*

is to refuse all such applications unless the consent in writing of the eldest son has been obtained and this consent has been duly attested before a Magistrate. The basis of this practice is the principle that since the eldest son has been designated in the conditions attached to horse-breeding grants as the successor in each case, his right to succeed should not be defeated except for very good reasons. The mere fact, that a horse-breeding grantee has married a young second wife, who is jealous of her step-children and has managed to set their father against them, is not a sufficient reason for depriving the eldest son of his right to succession. Unfortunately, this principle has not always been regarded in the past with the result that some uncertainty existed in the minds of eldest sons thus situated, and in some cases matters even proceeded as far as murder. Since the principle, noted above, has been strictly followed, no murders have occurred from this cause. The reason is not far to seek. No son is likely to cause his father's death, when, even without any judicial proof being available, the Deputy Commissioner would have the power to deprive him of his right to succeed, if the Deputy Commissioner had reasonable grounds for believing that the eldest son has been responsible for his father's death. The son of a horse-breeding grantee would in fact be the last person likely to take his father's life.

On the other hand, the power to deprive the eldest son of his right to succeed has by no means fallen into disuse. In one case a Sikh horse-breeding grantee died and his eldest son was passed over for succession on the ground that he had been taking a prominent part in the Akali agitation in Nabha State. As the result of this action, Akali agitation among Sikh horse-breeding grantees ebbed very rapidly, and, although in the years 1924 and 1925 a good deal of such agitation had existed in the Lower Jhelum Canal Colony, by the end of the year 1925 it had practically vanished.

The Sargodha Race Course.

The Sargodha Race Course was constructed by the District Board under the supervision of the District Engineer, Major Whitburn, and opened by Sir Alexander Stow, then Commissioner of Rawalpindi Division, in December 1924. In order to enable this to be done, some waste land, lying to the south-west of the Horse Fair Ground, was added to that ground, and thus it was possible to construct a course more than a mile in circumference with a straight of 3 furlongs. Subsequently in 1929 a lease was sanctioned in favour of the District Board of 553 acres $6\frac{3}{4}$ kanals of Government waste land within the limits of Sargodha municipality for 3 years with the option of renewal for another

CHAP. II, A. Agriculture and Irrigation. The Sargodha Race Course —*contd.*

2 years on the condition that the District Board would meet the cost of irrigating the land, and that, after a considerable rental had been paid to Government, any surplus, remaining with the District Board, should be devoted to the improvement of that part of the civil station. As the result of this generosity on the part of the Punjab Government, Sargodha should in time be possessed of a Horse Fair Ground and a Race Course worthy of its importance as the largest horse-breeding centre in the whole of India.

The actual body, which manages the Race Course, is the Race Course Club. This Club has taken on lease the Race Course from the District Board on a rental of Rs. 100 a year in addition to 10 per cent. on the capital value expended by the District Board on the buildings, railings, &c., of the Race Course. This capital cost is gradually being repaid partly out of the income from the races and partly from the rent of the land in and around the Race Course. In time with the help of the income from the adjoining land, rented by the District Board for this purpose from the Punjab Government, the capital expenditure on the Race Course will be entirely repaid and thereafter the expenses of the Race Course Club, over and above the rent of Rs. 100 paid annually to the District Board for the use of the land and the services of the District Board staff, will be reduced to the cost of providing prizes for the races and annual maintenance of the buildings and of the Race Course. The result of the opening of the Race Course at Sargodha has been that practically all the fillies, maintained in the Shahpur Area, are now raced for a couple of years before they are old enough for stud purposes. It is a well-known fact that, unless horses are actually raced, the value of the combinations of various strains of blood cannot fully be tested. The Sargodha Race Course enables this test to be made, and the results of races are of great assistance to the officers of the Army Remount Department in making their selection of strains of blood to be retained and developed in the Shahpur Area. It has been found by experience that those fillies, which have raced, make far better brood mares afterwards and produce a much higher percentage of foals to coverings. In view of the fact that a successful horse-breeder in the Shahpur Area can make by horse-breeding more than enough to recover the actual cost of feed and keep of his mares and young stock, the value of the Sargodha Race Course is thus clear, since it enables keen horse-breeders to obtain better foals and, therefore, to make more money. A considerable number of horse-breeders now keep mares in excess of the number which they are bound to keep according to the conditions

CHAP. II. A. — Agriculture and Irrigation. The Sargodha Race Course —*concld.*

of their grants. On the produce of these additional mares the Army Remount Department has no claim, and if a filly or colt by such a mare were to turn out to be a first class animal and to be successful in races both at Sargodha and elsewhere, the breeder would be able to make a very large profit by selling such an animal. The fact, that he is now in a position to make such profits, is due to the exertions of the Shahpur Area Horse-breeding Society, and the officers responsible for its foundation and guidance.

The Shahpur Area Horse-breeding Society.

The Shahpur Area Horse-breeding Society was founded in 1924 by Captain Mathews, who was District Remount Officer at the time. This Society is affiliated to the National Horse-breeding Society of India, and its object is to encourage horse-breeding both in the bound area of the colony and elsewhere. The Society held its first Horse Show in December 1924 and since then a Horse Show has been held every year. The Society is supported by voluntary subscriptions from horse-breeding grantees and other interested persons. It provides facilities for horse-breeders to show their animals at the Delhi Imperial Horse Show and elsewhere and it affords an organization through which the Race Course can be managed.

Horse Fairs (page 187).

In addition to the Horse Show, held by the Shahpur Area Horse-breeding Society in December each year, the long established Horse Fair, which used to be held at Shahpur, is now held every year in the end of February or the beginning of March at Sargodha. Recently it has been found that the importance of the Horse Fair had increased to such an extent as to interfere with the success of the Cattle Fair, which was held at the same time. Arrangements have, therefore, been made to hold the Sargodha Cattle Fair at the beginning of the cold weather and the Horse Fair at the end.

Cattle Fairs.

A Cattle Fair is held at Shahpur every year at the end of the cold weather. This fair has been eclipsed by the fairs held at Sargodha since the transfer of district headquarters to that place.

Sheep and Goat Fairs.

A fair for sheep and goats was instituted at Mitha Tiwana in 1926. It is held at the beginning of the cold weather and serves to encourage the inhabitants of Khushab Tahsil in the breeding of sheep and goats and also of camels. It is also the occasion for tent-pegging, *pir kaudi*, and other similar competitions. The Thal and Mohar support large numbers of sheep and goats and the gradual introduction of the mesquite tree (*prosopis juliflora*), flourishing specimens of which may now be round at Uttera, Katha Saghral, Nurewala, Chittidil and else

where, will by increasing the amount of fodder available both during the hot weather and after the rains, enable the Tahsil to support even larger numbers of sheep and goats than at present.

CHAP. II, A — Agriculture and Irrigation.

Irrigation (page 192).

Various important developments have taken place in connection with the irrigation of Shahpur District since Mr. Leigh's Gazetteer was wirtten in 1917. The most important factor, which has arisen in connection with the various problems then under consideration, has been the rise in the subsoil water-level.

Originally the Jech Doab, between the Jhelum and the Chenab rivers, consisted of an upland with a water table increasing in depth with the increase in the distance from these two rivers. Subsequently as irrigation from the Lower Jhelum Canal extended, the section of the subsoil water-table, between the Jhelum and the Chenab rivers, which had originally been concave when viewed from above, became straight and then convex. This is due to the fact that more water was poured by the Lower Jhelum Canal on to the area in question than could be absorbed by evaporation or carried off by seepage into the two rivers.

Water-logging.

After the heavy rains of the year 1921 in some places water-logging actually began. At Wan below the high bank (*dhaya*) here for a small area irrigation was allowed of the intensity of 75 per cent. instead of the usual 40 per cent. allowed below the *dhaya*, although the land in question was proprietary land and even in the upland *bar* proprietary lands received only 40 per cent. irrigation, a considerable area was put out of cultivation on account of water-logging and the lowest portions of the land were actually flooded.

To the north of Bhalwal in Chak 13-N.B. a large area of land, between the Northern Branch of the Lower Jhelum Canal and what was known as the Bhalwal Jhil, was also seriously affected, and most of the chak became unfit for cultivation. Further down the Raniwah Drain, to the south of the Sulki Branch, more damage was done, although in this case the damage was due more to repeated flooding along the course of the Raniwah Drain and to *kallar* rising to the surface of the soil, between the over-irrigated Sargodha Remount Depôt and the Raniwah Drain, than to actual water-logging.

At the same time the Punjab Government realised that large areas of land in Gujranwala and Gujrat were going out of cultivation on account of water-logging and the problem was seriously investigated for the first time.

CHAP. II, A. — Agriculture and Irrigation. Water-logging—contd.

The revenue authorities of the district were able to point out to the Public Works Department, Irrigation Branch, two important facts. The first was that the whole area, between the high bank to the north of the Northern Branch of the Lower Jhelum Canal and the river Jhelum, consists of light alluvial soil overlying a bed of impervious clay. This alluvial soil is so porous that every year it absorbs water, partly on account of the rise of water in the bed of the river Jhelum, and partly on account of irrigation from the inundation canals. With the fall in the river and the closure of the inundation canals, however, the surplus water from this porous soil is rapidly discharged. This can be seen from the fact that the flow of water in the river Jhelum during the early part of the cold weather is very considerable at Khushab, although at the Lower Jhelum Canal head works at Rasul all the water to be found in the river is being diverted into the Lower Jhelum Canal. This quality of the soil is responsible for much of its fertility, since the moisture, remaining behind after the level of the subsoil water has fallen in the wells, enables excellent crops to be matured, provided that in the latter part of the cold weather sufficient showers of rain take place. The fall of the subsoil water in the wells naturally varies according to the distance from the river, wells close to the river bank showing much greater variations than those nearer the *Bar*.

The soil of what may be called the inundation canals tract exhibits these characteristics in a marked degree in the north-east of the district. At Shahpur itself there is a hump of clay which retains water for a much longer time. In 1897, when on account of over-irrigation from the Eastern Station Canal, there took place serious water-logging, in Shahpur itself it was found that the subsoil water had risen in places to within three feet of the surface. Subsequently, however, the reduction of the intensity of irrigation in Shahpur Branch caused a fall in the level of the subsoil water and showed that, if reasonable precautions were taken, even Shahpur need not become water-logged. The rest of the inundation canal area is quite safe from water-logging, since the water drains off every winter when the water in the river Jhelum falls to its winter level.

Towards the south-west of Shahpur Tahsil the soil becomes less porous, but even in this area the danger of water-logging may be entirely discounted.

The second fact of importance was the discovery of a bed of sand about 40 feet in depth and beginning about 15 or 20 feet

below the surface running along the strip of land immediately to the south-west of the Raniwah depression and under-lying extreme north-western edge of the *Bar*. This bed of sand can be seen in wells and deep holes in the *Bar*, and crops out on the side of the high bank (*dhaya*), where the land runs down to the Raniwah Drain. The importance of this bed of sand is that it serves as the means of drainage for the area between the Northern Branch and the *dhaya*. If it were not for the existence of this bed of sand, this area would long ago have become water-logged. The existence of water-logging in Chak 13-N.B. between Bhalwal and the Bhalwal Jhil is partly due to the fact that this bed of sand is interrupted at that point, and partly to the fact that the gradual filling up of the Bhalwal Jhil had prevented the running off of seepage water from the Northern Branch towards the river Jhelum.

CHAP. II, A Agriculture and Irrigation. Water-logging—*concld.*

When the seriousness of the threat of water-logging in the Punjab was realised, the Punjab Government took vigorous action to deal with the various problems which arose in each district. In Shahpur District the main problem is the drainage of the Raniwah depression on the north-west of the Lower Jhelum Canal and of the Budhi Nala between the Lower Jhelum Canal and its Khadar Branch. After prolonged consideration the alignments of the Mona and the Upper Raniwah Drains were settled. The Mona Drain dealt with the seepage, which accumulates from the Upper Jhelum Canal, to the south of the Lower Jhelum Canal main line near Mona, and passes in a syphon beneath the Lower Jhelum Canal and through a culvert under the railway. On account of this seepage as well as because of over-irrigation in the Mona Remount Depót, the water-level had been steadily rising for some years with the result that what was known as the Pakhowal Jhil was formed near the Railway Station of Pakhowal, and a considerable area of land went out of cultivation. The natural outflow of drainage to the west was blocked by an extension of the privately owned Piranwala Canal, which crossed the line of drainage and irrigated some land lying to the south of the drainage.

The Mona Drain.

In order to drain this area, the Mona Drain was constructed and began to function in 1928 with the result that the Pakhowal Jhil was completely drained, and much land, which had gone out of cultivation, became culturable once more.

The Upper Raniwah Drain.

Further to the west the Upper Raniwah Drain was aligned between the irrigation systems of the various inundation canals on the north and north-west and the Lower Jhelum Canal on the south and south-east. A branch from the Upper Raniwah

CHAP. II. A. Agriculture and Irrigation. The Upper Raniwah Drain—concld.

drain was dug to the Bhalwal Jhil. After considerable discussion the line of what is known as the Lar Drainage was adopted, in preference to what was ordinarily called the main Raniwah Drain, on the ground that the latter was crossed by several of the private inundation canals. Finally it was discovered by Mr. J. B. G. Smith, Chief Engineer, that an easy run-off could be obtained from the Sulki Branch area to the north of the Sulki Escape, and finally through the bed of the Sulki Escape into the river Jhelum without the necessity of digging a very deep drain along the course of the old Raniwah Drainage right down into Jhang District.

The whole drainage system of the Mona and the Upper Raniwah Drains began to function in 1928 and did much to carry off flood water after the disastrous flood of 6,01,000 cusecs in the monsoon of 1928 and the still more disastrous flood of 7,60,000 cusecs in the river Jhelum in 1929.

The Lower Raniwah Drain.

The original proposals for excavating the Lower Raniwah Drain from the Sulki Branch, the syphon under which has now been blocked, right down to the south-west extremity of the district and across a portion of Jhang District into the river Jhelum, have lately been revised. Arrangements have now been made to collect and pump the water into the Faruka distributary. This will relieve water-logging in the chaks and villages immediately to the south of the Sulki Branch.

Inundation Canals (page 192).

In 1927 Mr. Farquharson, Executive Engineer, conducted an investigation into the condition of the various inundation canals in the district, and into the various problems of flooding and water-logging existing in the inundation canal areas. The result of his investigation showed that serious danger of flooding existed in this area, whenever the water-level in the river Jhelum rose to an abnormal height. His prognostications were borne out in the year 1928 and still more in the year 1929, when water flowed out of the river through the depression near the Victoria Bridge at Chak Nizam, and also flowed over the high ground between Chak Ramdas and Kot Bhai Khan. The water inundated the low-lying land near the Raniwah Drain and flowing on to the Sulki Branch carried away a considerable length of the canal banks. Great damage was done in many places. The question of constructing embankments near Chak Nizam, and elsewhere, to keep the river water from flowing over the high ground in the neighbourhood of the river and down into the Raniwah depression and of strengthening the banks of the Shahpur Branch is still under consideration.

CHAP. II, A

Agriculture and Irrigation.

The Shahpur Branch (page 198).

The fate of the Shahpur Branch, mentioned by Mr. Leigh on page 198, has recently been settled. Originally an application was made by the private canal owners that the Shahpur Branch should be constructed, in order to supply water to their canals, which they feared might be seriously affected by the reduction in the hot weather supplies of water in the river Jhelum, caused by the construction of the Upper Jhelum Canal. These fears, however, were not borne out by actual results. The only canals to suffer from the construction of the weir at Mangla were the Government inundation canals, which are less favourably situated. The private canal owners generally were opposed to the Shahpur Branch being brought into use. The question has been considered from the point of view of water-logging, and investigations made to decide whether the addition of the supplies of water, which the Shahpur Branch would carry, to the existing supplies of inundation canal water, on the top of the high ground between the Raniwah depression and the banks of the river Jhelum, would raise the subsoil water-level during the summer to such an extent as to interfere with the run-off of subsoil water from the Bar, have resulted in the decision that the Shahpur Branch should be abandoned and the land restored to its former owners except where the banks were needed to keep out floods from the river.

As has already been explained, there is no actual danger of water-logging in the Raniwah depression and in the inundation canal area. The danger of flooding is one which can be separately considered and separately dealt with, and even flooding would only cause occasional damage, and would not give rise to a permanent state of water-logging. Where, as in the Pakhowal Jhil, more lasting damage has been caused, that damage has been due to the blocking of the natural line of drainage. The construction of the Mona and the Upper Raniwah Drains has put an end to any danger of permanent deterioration from such a cause. The soil of the inundation canal area is so porous that during the cold weather the subsoil water drains rapidly out of it into the river. It is no doubt important that perennial irrigation should not be extended to this tract, since that would mean holding up the subsoil water permanently to something like its summer level and not allowing the comparatively rapid run-off which takes place from the adjoining area of the Bar during the winter. It is for this reason that the occasional practice, adopted by some of the private canal owners, of constructing bunds in channels and creeks of the river, and using their canals for irrigation during the cold weather, is open to objection.

CHAP. II, A.

Agriculture and Irrigation.

The Shahpur Branch (page 98)—*contd.*

On the other side of the *Bar*, the Budhi Nala has been surveyed. With the rise of subsoil water in the *Bar* the rise of the run-off of subsoil water towards the river Chenab has increased, and every year water is showing itself further and further down the Budhi Nala. The drainage of the Wan Jhil has already been taken in hand with some success. All the land has been reclaimed except for a small portion which was previously under water. In the neighbourhood of Bhabra the subsoil water is still not high enough to cause any anxiety. The Budhi Nala runs in a series of loops, which would have had to be short-circuited if the drain was to function efficiently. It has, however, been decided to instal pumps in order to deal with this accumulation of water.

Another place, where anxiety has been caused, is the angle between the Northern and the Southern Branches. A suitable line of drainage, however, exists in this locality and can be utilised, if necessary.

Generally speaking, the problem in the *Bar* is one of finding an equilibrium between the water, which is poured from the canal on to the land, and the run-off of the subsoil water into the rivers on either side. Evaporation takes place very rapidly during the hot weather, and, if the canal be closed for sufficiently long periods during the hot weather, the subsoil water-level will be very sensibly reduced. Experiments have been made with periodical canal closures during the course of the hot weather to ascertain the effect of the subsoil water-level in considerable numbers of wells which are regularly measured. These closures naturally give rise to considerable complaints on the part of the cultivators ; but although the danger of water-logging in Shahpur District is not so acute as elsewhere, it is clear that it would be dangerous to neglect the possibility of water-logging, more especially in view of the fact that once such soil has gone out of cultivation, many years must elapse before it becomes fit for cultivation again, and it may never recover its former fertility.

One alleviation of the danger of water-logging consists in the better utilisation of water by the cultivators. The more thinly the water is spread on the surface of the soil, the less water will penetrate to the subsoil underneath. The gradual increase in the area cultivated is, therefore, a good sign, since the supply of water in the canal is approximately constant and the meaning of the increase in cultivation is that the water is being used to greater and greater advantage every year. The following table gives the figures for each revenue year, the total area irrigated and assessed by the Irrigation Branch to land revenue, excluding

CHAP. II, A
Agriculture and Irrigation.
The Shahpur Branch (page 198)—*concld.*

the area on which no land revenue has been assessed under the ordinary rules on account of the failure of the crops, but including the area on which land revenue was originally assessed and afterwards remitted on account of some special calamity :—

Year.	*Area in acres.*
1918-19	696,301
1919-20	701,221
1920-21	706,628
1921-22	729,569
1922-23	726,499
1923-24	734,702
1924-25	737,085
1925-26	746,272
1926-27	755,280
1927-28	755,675
1928-29	765,763
1929-30	650,174
1930-31	731,459

An interesting discovery has recently been made by the employment of the Eotvos Torsion Balance that the Kirana Hills are only an outcrop of a subterranean range, which runs from the south of the Punjab through Sangla Hill and Chiniot, at both of which places it appears above the surface, to the Kirana Hills south of Sargodha and to Shahpur. North-west of Shahpur the range is continued, but at a very much greater depth, and it appears to run underneath the Salt Range. This subterranean range, where it is near the surface, appears to serve as a barrier, which holds up the subsoil water. Roughly speaking, it may be said that in the Punjab the danger of water-logging is generally far more serious to the north-east of this range than to the south-west.

Section B.—Rents, Wages and Prices.

Prices of food (page 211).

Since the preparation of Mr. Leigh's gazetteer in 1917 the prosperity of the district has steadily increased. Towards the end of the great war the price of food rose very rapidly and the

CHAP. II, B.

Rents, wages and prices.

Prices of food (page 211)—contd.

increase continued until 1921 when wheat was sold at about four seers per rupee. After that owing to favourable rains in the year 1922 the price of food steadily decreased, although it was not until the spring of 1930 that world overproduction brought about the disastrous slump in prices which drove the cultivators to sell their wheat in 1931 for as little as a rupee a maund. Recently, however, the abandonment of the gold standard has helped prices to recover.

The demand for cotton, especially American cotton, increased very greatly owing to the shortage in America and prices rose to Rs. 22-12-0 a maund in 1922-23 and Rs. 28 a maund in 1923-24. After that prices fell to Rs. 12 in 1926-27, Rs. 15 in 1928-29 and Rs. 13 in 1929-30. In 1930-31 there was a serious slump; but lately prices have recovered.

The result has been a very great appreciation in the value of land as compared with 1917, though the excessively high prices obtained from 1921 to 1927 are now no longer obtainable, and land is at present difficult to sell. In spite of the reduction of supplies of canal water, the *zamindar* now produces better results than he did because he uses his water more economically, and has taken to sowing better seed and ploughing and harrowing with better implements. The improvement in communications has also helped the *zamindar* to a large extent. The income of a square of land to a holder, who takes a personal interest in the process of cultivation, may be as much as Rs. 1,500 on a square of 27·7 acres when prices are favourable. Land auctiond in the canal colony on account of the failure of horse-breeders to comply with the conditions of their grants resulted, a few years ago, in offers of an average of about Rs. 400 a square for leases extending up to a period of ten years, the responsibility for maintaining the mare and its progeny lying upon the lessee. The best land fetched up to Rs. 800 per annum for a square in such conditions. The value of land around Bhagtanwala might be taken as anything up to a thousand rupees per acre, or even more if the land is situated close to the village site The best land in the Bar Utla circle around Sargodha excluding the tract immediately around Bhagtanwala and in the canal irrigated area of Bhalwal Tahsil was worth Rs. 800 an acre and inferior land in these circles and in the better portion of the Bar Hethla circle of Sargodha Tahsil was worth about Rs. 600 an acre. Towards Sillanwali the price decreased to Rs. 500 and even Rs. 400. Beyond Sillanwali, in what is known as the Sobhaga Jungle tract, the value of land dropped still further to about Rs. 250 for land, which can be easily cultivated, but which

produces more gram than anything else, owing to its sandy nature. The extreme portion of this tahsil to the south is better off and the value of land in the Chaks located for horse-breeding might be reckoned as Rs. 400 an acre, although the peculiar characteristics of the soil do not make these Chaks suitable for horse-breeding.

CHAP. II, B

Rents, wages and prices.

Prices of food (page 211)—*concld.*

The value of land in Shahpur Tahsil in the inundation canal irrigated tract varies considerably. The best of it was worth about Rs. 500 an acre. The soil of this tract from Bhera to Shahpur and a little to the south retains a good deal of moisture even after the river Jhelum has subsided and the subsoil water-level has fallen. In winters of good rainfall excellent crops of wheat are produced. The inferior soil, which can be cultivated, might be valued at Rs. 400 to Rs. 300 an acre. In the Ara Circle of Shahpur Tahsil, where perennial irrigation is provided by the Lower Jhelum Canal, the value of land was about Rs. 400 an acre on the average.

In the Salt Range the value of the best land is higher than in any other part of the district. The main Sun Valley rivals the Bhagtanwala area in value. The best land fetched up to Rs. 1,400 an acre and large areas of land could fairly be valued at about Rs. 1,200 an acre. Cultivation is carried on with extraordinary diligence, and it is the usual practice to plough the land eight or ten times before sowing wheat in the autumn. The use of improved agricultural implements would make a great difference in this tract, and its semi-temperate climate should suit the cultivation of vegetables and fruit which cannot grow in the heat of the Punjab plains. The chief difficulty in connection with the Salt Range was formerly that of communications and this difficulty no longer remains.

The above prices were calculated in 1928 before agricultural prices had fallen; but they will give a standard of proportion, which might again become valid with the return of rural prosperity.

Since 1917 the standard of living has increased considerably.

Material condition of the people (page 214).

Shahpur Tahsil is inhabited by many large proprietors and those who in the old days possessed considerable areas of barren land, which are now irrigated by the Lower Jhelum Canal, find themselves in a position of unexpected affluence. In recent years the number of privately owned motor cars has enormously increased. There are now 103 in the district and with the increasing improvement of communications this number will grow rapidly. The extension of mechanical transport

CHAP. II, B. — Rents, wages and prices. Material condition of the people (page 214)—concld.

has also affected the masses. There are now 217 lorries licensed for running in the district, and the ordinary labourer has found it cheaper, if he has to make a journery of some 20 miles, to ride in a motor lorry and do a day's work at the end of it instead of spending one or two days by walking the whole distance and tiring himself out. It is not an uncommon sight to see an ordinary agricultural labourer with his *Kassi* sitting in a motor lorry.

In the canal colony the condition of primogeniture, which is enforced in the case of horse-breeders, must tend to keep up the standard of living. The *zamindar*, who works with his own hands and owns two squares of land, could until recently make an excellent livelihood out of these two squares. Those who fail to do so are generally absentees or extravagant. It is most instructive at an agricultural association meeting to enquire what is the time. The number of gold bracelet wrist watches produced by the more enlightened *zamindars* of the canal irrigated area on such occasions is astonishing. The Imperial Bank imports many lakhs of bar gold every year and this is absorbed mostly by the *zamindars*. The residents of the towns have also had their shares in this prosperity ; but the fortunes made belong more to the few than to the many, since only a few people had the necessary foresight, at the foundation of the colony, to buy up all the land upon which they could lay their hands, and keep it.

Section D.—Mines and Mineral Resources.

Oil (page 26).

Mineral oil exists in considerable quantities in the Salt Range ; but so far it has not been successfully exploited. The Attock Oil Company prospected it for some time near Khabakki and discovered oil, but not in sufficient quantities to make it worthwhile for them to start operations on a large scale. Further to the west in Rakh Anga and the adjoining slopes in Attock District an oil bearing stratem 80 feet thick has been found ; but this has not yet been proved, and possibly this region will not prove any more satisfactory than the region further to the east, when drilling operations have commenced, although the oil obtained in samples is of excellent quality.

Section E.—Arts and Manufacture.

Factories (page 231).

There are now 33 factories registered under the Factory Act in this district. The tctal number of factories in the colony

Section G.—Means and Communications.

Railways (page 237).

The scheme, mentioned in Mr. Leigh's Gazetteer of 1917, of railway lines from Sangla Hill to Khushab, *via* Chiniot, Handewali, Sargodha, and Shahpur is shortly to materialise. Direct railway communication with Lahore will be an immense boon to the district. At present it is necessary for a traveller from Sargodha to Lahore to spend either the whole night or the whole day in the train, and travel either by Lala Musa or by Shortkot Road, both of which points are at the apex of triangles, of which the base is the direct line from Sargodha to Lahore. The projected railway from Bhera to Shahpur, which for the present has been postponed, will open up a tract of the country at present greatly in need of better communications. The tract to be traversed is a fertile one and a considerable imcrease in the prosperity of the inhabitants of the tract might be expected, if the railway were built.

The third project for constructing a line of railway from Gujrat through Halalpur near the river Chenab and on to Sargodha has also been postponed. This would open up the Chenab circle of Bhalwal Tahsil, which is another isolated and somewhat neglected tract. Besides these the only obvious remaining line to be required would be a connecting line between Shahpur and Sahiwal joining the Sargodha-Jhang railway near Shah Nikdar at the point where the railway after running south-west

CHAP. II, G. — Means and Communications. Railways (page 237)—*concld.*

turns due south. This would open up the whole of the Ara tract and restore all of its old time prosperity to the town of Sahiwal.

Railway extensions to the west of the river Jhelum will no doubt await the construction of the Sind Sagar Canal.

Roads (page 238).

Great strides have been made in the last two years in the development of communications by road in the district. In 1925 the main arterial road from Lahore to Khushab was taken over by the Public Works Department. The road was gradually levelled from Bhagtanwala right through to Talibwala on the bank of the river Chenab, and metalled as far as Laksin, and a boat bridge was laid across the river Chenab by the spring of 1928 so that direct communication with Lahore became possible. Since then the metalling in Shahpur District has been carried on as far as Talibwala on the river bank, while on the other side the road has also been metalled right through from Lahore as far as the river. The effect of the taking over of this road on the finances of the District Board was not materially felt at once, since the District Board handed over to the Public Works Department nearly Rs. 38,000 of worth stone metal which had been collected for repairing the road. The District Board had, however, shortly before this resolved to raise its local rate to the maximum laid down by the District Board Act, and since it had allotted definite percentages of its regular net income to the Education, Medical and Veterinary Departments, a large sum was assured for annual expenditure on the upkeep of roads. It thus became clear that the District Board could afford to increase its metalled roads to a very large extent, and a loan was obtained from Government for a programme involving an expenditure of Rs. 7½ lakhs in three years. In 1928 on the suggestion of Malik Firoz Khan, Noon, Minister for Local Self-Government, a further loan of Rs. 1½ lakhs was raised for im proving unmetalled roads. Until the year 1924 the only extensions, made to metalled roads during a period of about 17 years, were a small extension along the road from Sargodha to Sahiwal, another along the road from Sillanwali to Faruqa, and the beginning of two roads from Bhalwal to Kotmoman and Phularwan to Miana Gondal, of which last two were to be constructed out of Government grants received several years previously. In 1924 the roads to Kotmoman and to the boundary of the district near Miana Gondal were completed and the road from Sargodha to Sahiwal was pushed on. By the summer of 1926 19½ miles of this last road had been constructed and in 1928 it reached Sahiwal.

CHAP. II, G.

Means and Communications.

Roads (page 238)—*contd.*

The mythical road from Sargodha to Lak and a quarter of a distance from Lak to Kalra, which for many years has been shown in the map of the district as metalled, has now been metalled, and was completed in 1928 as far as the boundary of the village of Lak. A new alignment has been adopted in order to utilise the Sargodha-Shahpur road as far as the crossing of the Sulki Branch.

Bhalwal is now the centre of a net work of roads, metalled and unmetalled. In addition to the completion of the metalled road to Kotmoman, which has been prolonged by the unmetalled road to Ghullapur and Bhagtanwala, a metalled road has been constructed in the direction of Chak Ramdas as far as Sardarpur. A road from Bhalwal to Bhera has been aligned, and now bears an enormous volume of traffic. The soil of the locality is generally hard and provides an excellent unmetalled surface. The system, of which the District Engineer Major Whitburn, was the pioneer of digging a deep ditch on either side, and throwing the spoil in the middle of the road, the surface being cambered continuously from one ditch to the other, and subsequently watered with a watering-cart and rolled with a light steam roller, has proved most successful, and possibly it may not be necessary to metal this stretch of road for a considerable length of time. Other first class unmetalled roads have been constructed from Bhalwal to Shahpur in the west and to Salam in the east. The accommodation road along side the railway has also been improved so as to afford direct communication by road with Sargodha.

A net work of roads has also been constructed round Phularwan. In addition to the metalled road from Phularwan to Miana Gondal, first class unmetalled roads have been made from Phularwan to Bhera in the north and Salam and Kotmoman in the south, thus affording direct access by road from Bhera to Lahore, *via* Ghullapur and Bhagtanwala.

The road from Sillanwali to Sahiwal has been metalled as far as Faruqa and from Faruqa to Bhalwal it has been put in order as a good unmetalled road. The accommodation road, between Sargodha and the south-western end of the district has also been improved, and an unmetalled connection has been made between Shah Nikdar Railway Station and Jahanian Shah at the end of the old road running through Sahiwal, Shahpur, Jhawarian, Chak Ramdas, Bhera and Miani to Malakwal. Portions of this road have also been improved.

CHAP. II. G.

Means and Communications.

Roads (page 238)—*contd.*

In Khushab Tahsil recent progress has been equally striking. The road from Khushab to Mianwali was realigned in 1928 immediately to the south of the railway in order to avoid the sand hills which had blown up from the south and covered the old road which ran through Mitha Tiwana. This realignment was made possible by the generosity of the local landowners under the persuasion of Lala Daulat Ram Budhwar, Sub-Divisional Officer, and Khan Bahadur Malik Mohammad Sher Khan, Tiwana, of Mitha Tiwana. Subsequently this road, which was already suitable for motor lorry traffic, was taken over by the Public Works Department.

Another unmetalled road has been constructed from Khushab to Katha Saghral, and to the south of Khushab the old riverain road has been improved as far as Girot. The Salt Range has been made accessible by the improvement of the old road from Khushab to Nurewala. The worst portions of this have been metalled, and the old camel track from Nurewala to Kathwai has been entirely remade on a re-alignment selected by the District Engineer Major Whitburn, which enables motor traffic easily to surmount the rise of 2,000 feet in the course of a 10 mile climb with a gradient which, except in two or three places, is not steeper than 1 in 20. The roads, inside the Salt Range, have also been greatly improved and a motor traffic now runs from Kathwai through Khura and by a new alignment, also selected by the District Engineer Major Whitburn, to Naushahra and Sodhi. From Naushahra the road has been improved as far as Uchhali and even Sakesar, with an elevation of nearly 5,000 feet, is now accessible by motor car, although the road in one place still requires re-alignment in order to make it quite easy. From Naushahra a road was constructed to Mardwal at the expense of the inhabitants of that village, as a thank-offering for their being relieved from the imposition of a punitive police post, which had been located for many years past in their village, and in commemoration of the visit of His Excellency Sir Malcolm Hailey to the Salt Range in the spring of 1927. The road to Mardwal has since been continued to Khabakki, Jaba, and Pail, near which it meets the continuation of the road from Sodhi Jai Wali. The road is now complete as far the boundary of the district close to Munara, and, since a similar road has been constructed in Jhelum District, direct communication between Sargodha and Rawalpindi by road has become possible.

The road up the hills from Nurewala to Kathwai constitutes a remarkable engineering feat. Half of the cost of about

Rs. 2 lakhs was met by the Punjab Government in recognition of the military services of the inhabitants of the Salt Range during the great war. It has opened up nearly a thousand square miles of country, carrying a pouplation of about 50,000. In the old days the inhabitants of this tract were notorious for their turbulence and lawlessness; but since the opening up of the country dacoities have become a thing of the past. The inhabitants themselves now admit that it would not be safe to attempt to commit dacoities on a paying sacle, in a country where the police could now pursue them in lorries, and overtake them before they could dispose of their booty.

CHAP. II, G. — **Means and Communications.** Roads (page 238)—*concld.*

This road was initiated by His Excellency Sir Malcolm Hailey on the 10th of April 1927 and formally opened by him on the 1st of April 1298, on which date also he opened the unmetalled road from Khushab to the Mianwali border, the metalled roads from Sargodha to Kalra, from Sargodha to Sahiwal, and from Sillanwali to Faruqa, and finally the boat bridge across the river Chenab by means of which he proceeded back to Lahore by road in the evening.

Encamping Grounds. (page 239).

All the encamping grounds in the district have now been surrendered by the Military Department except the aviation ground at Khushab part of which belongs to Government and part of which is leased from the co-sharers of the estate for use as a landing ground for aeroplanes.

CHAPTER III.—ADMINISTRATIVE.

Section A.—Administrative Divisions.

CHAP. III, A.

Courts of first instance. (page 242.)

The following table will show the honorary magistrates and judges now exercising powers in this district :—

1	2			3
	Nature of jurisdiction exercised.			
Name of gentleman exercising judicial powers.	Criminal powers.	Civil powers.	Powers exercised as a Bench, section 15, Cr. P. C.	Local area of jurisdiction.
Umar Hayat Khan Tiwana, the Hon'ble, Honorary Colonel, Nawab Malik Sir, of Kalra, K.C.I.E., C.B.E., M.V.O.	1st class, 9-4-30.	..	..	Shahpur District.

Section B.—Civil and Criminal Justice.

Crime (page 249).

The state of affairs depicted in Mr. Leigh's Gazetteer of 1917 still continues to a large extent. Cattle lifting goes on as before, but perhaps rather less openly. Public opinion has not yet ranged itself definitely on the side of the law. The chief lines along which cattle are taken are :—

(*a*) Through Bandial and on to Khushab or Hamoka.

(*b*) Through Adhi Sargal to Baggi and Haveli Majoka at which last two villages punitive police posts have recently been located, and then on to Jhang District.

(*c*) Connecting up with (*a*) through Shahpur and Bakhar due east towards Miana Gondal in Gujrat District, along a line of *Jangli* villages situated in the north of Sargodha Tahsil such as Lak, and the centre of Bhalwal Tahsil such as Salam.

CHAP. III, B.

Civil and Criminal Justice.

Crime (page 249)—*concld.*

(*d*) Connected with (*c*) from the *Jangli* villages of the northern and central portion of Sargodha Tahsil towards Asianwali, Hadda to Bhabrana in Jhang District. This last place is a great centre for collecting and exchanging stolen cattle.

The Salt Range owing to its rocky nature is practically free from cattle lifting. Attempts were made to start the practice in the villages of Nalli, Nari, &c., in the years 1923-24, but were stopped by vigorous action on the part of the Sub-Divisional Magistrate.

Crimes of violence (page 249).

Crimes of violence are most common among the Janglis of the *Bar*, the Sikh colonists, and the Awans of the Salt Range.

The Janglis are experts in massacres. Large numbers of persons assault a single man or a small party. After killing the object of their dislike, they cut him up into small pieces and dispose of the corpse so that no trace of it remains. As a rule these methods are successful: convictions are rare, and death sentences are rarer still. This type of crime appears to be on the increase.

Among the Sikhs it is more usual that a single person, or two friends, should go and murder the victim. In a recent case, a well-to-do man, who, according to the rules, was entitled to a gun license, used his gun, as soon as he bought it, to commit a murder, and was duly sentenced to death.

In the Salt Range, murders are still fairly common. The cause of dispute is usually a woman, but sometimes quarrels about rights to irrigation from streams end fatally. In times past the bolder spirits among the young men were wont to band themselves together to commit dacoities, usually at a considerable distance from their homes. During the Great War between 3,000 and 4,000 of the young men of the Salt Range enlisted, and crime decreased considerably; but a few dacoities were perpetrated, the last one of real importance being committed at the village of Nalli.

After the War outlaws from other districts began to find it convenient to take refuge in the Salt Range. The notorious Tora of Thoa Mahram Khan in Attock District spent much of his time in the Salt Range, although he was finally arrested crossing the river Jhelum.

Subsequently in the summer of 1923, a family dispute arose between certain residents of Bhukhi village. The aggrieved party prosecuted its assailants, and both parties were bound

down to keep the peace. The complainants, however, considering that the accused had not been sufficiently punished, took the law into their own hands, and calling in one Arif Shah, an outlaw from Attock District, shot down a considerable number of their enemies. Three brothers—Amir Khan, Jahan Khan, and Ali Akbar—then absconded with Arif Shah, who was after a while found dead in a cave. It was assumed that he had been murdered for the sake of his rifle. Later on one Samanda of Khura, an *ex*-soldier, who was wanted in connection with numerous crimes, joined the outlaws and finally Hidayat Ali of Khura, another outlaw with a similar record, also came to the Salt Range hoping to murder Samanda. Jahan Khan was killed while absconding. Amir Khan, Ali Akbar and Samanda caught Malik Allahayar Khan, the younger brother of the Zaildar of Sabhral, on the camel track between Kathwai and Nurewala, and murdered him for helping to have their property attached. A reign of terror was established in the Salt Range, and, although large numbers of mounted police were sent up, they were unable to bring the absconders to justice.

In August 1924 the eight Zaildars of the Salt Range, in spite of the murder of Malik Allahyar Khan, arranged to give evidence against all the persons, who were known to be harbouring and aiding the absconders. A list of about 150 persons was prepared and 62 persons were bound down under section 110, Criminal Procedure Code, for harbouring robbers, and sent to jail for failing to provide adequate security. Information was then given to the police that Samanda would be found in a certain place, and he was surprised and arrested in the early morning at great personal risk by Sayad Murtaza Shah, Inspector of Police (now Deputy Superintendent). Shortly afterwards, Amir Khan and Ali Akbar were persuaded by their brother Jamadar Surkhru Khan to surrender themselves. While the appeals against the order for taking security were still undecided, news arrived that Hidayat Ali had been caught sleeping at night in consequence of the information given to the late Rai Sahib Lala Buta Ram, Inspector of Police (later Deputy Superintendent). The appeals of all those, who had been sent to jail for failure to give security, were promptly accepted, and they were immediately released. The four absconders were tried for murder and hanged, and peace reigned once more in the Salt Range. Probably for the first time on record a year elapsed before a single murder was recorded in the hill tract. The good work done by those who had taken a share in bringing the absconders to book was not overlooked. Malik Karam Ilahi Khan and Malik Muzaffar

CHAP. III. B. — Civil and Criminal Justice. Crimes of violence (page 249)—*concld.*

Khan, and the Zaildars of Uchhali and Khabakki, were created Divisional Durbaris in recognition for these and other services. Malik Muhammad Sher Khan, Zaildar of Hardo Sodhi, and Sayad Chan Pir, Zaildar of Sodhi Jaiwali, received Jagirs of Rs. 400 per annum each, three squares of land were allotted to those who had taken leading parts in the arrest of the absconders and three half squares were granted to the three sons of the murdered Sarbarah Zaildar Malik Allahyar Khan. Two horse-breeding grants of two squares each, which had been confiscated from Kamal-ud-Din and Shahab-ud-Din, the sons of Mian Nizam-ud-Din, of Khura and Mitha Tiwana, on account of the part played by them in harbouring Tora, the dacoit, were re-allotted to Malik Allahyar Khan, and Malik Shahadat Khan, the sons of the Zaildar of Uchhali and of the Inamdar of Warcha.

Section C.—Land Revenue.

Change of tahsil headquarters from Bhera to Bhalwal (page 255).

The most striking change, which has taken place since Mr. Leigh's Gazetteer of 1917 was written, is that the tahsil headquarters were transferred from Bhera to Bhalwal in the year 1917. It was recognised that Bhalwal, being situated on the main line of railway to Karachi and being in a more central position, would eventually become more important place than Bhera. The latter became the headquarters of a sub-tahsil with a Naib-Tahsildar permanently stationed there. He also acted as sub-registrar and as sub-treasury officer when the seasonal sub-treasury was opened for the payment of the two instalments of land revenue. In the year 1924 the seasonal sub-treasury was abolished, without much inconvenience to land revenue payers, and to the very great convenience of the administration; but the headquarters of the Naib-Tahsildar for revenue and registration purposes were left at Bhera. The tahsil is now universally known as the Bhalwal Tahsil.

Mr. Ram Chandra's Assessment.

Mr. Ram Chandra, I.C.S., assumed charge of Settlement Officer, Sargodha, on the 21st of November 1921 and eventually made over charge on the 5th of April 1925. The new rates of assessment came into force in Sargodha and Bhalwal Tahsils in Kharif 1923 and in Shahpur Tahsil in Rabi 1925.

Changes in rates of assessment.

Mr. Ram Chandra's assessment resulted in a considerable increase in the land revenue demand. The only possible method of comparing this assessment with Mr. Rudkin's is to give the figures for the land revenue demand for the last two harvest before the new assessment came into force and the first two harvests after it had come into force, since the land revenue

CHAP. III C. Land Revenue. Changes in rates of assessment—*concld.*

assessment is a fluctuating one. The following table will show these demands in each assessment circle :—

Circle.		Kharif, 1922.	Rabi, 1923.	Kharif, 1923.	Rabi, 1924.
		Rs.	Rs.	Rs.	Rs.
Bhalwal Tahsil	Bar	1,82,435	4,08,482	4,71,316	9,74,687
	Chenab Hethla	19,442	97,272	4,772	18,392
	Chenab Utla	..	..	40,292	1,08,532
Sargodha Tahsil	Sobhaga	..	..	21,987	49,949
	Bar Hethla	1,09,380	2,50,999	1,30,803	2,81,299
	Bar Utla	1,74,110	4,10,683	2,60,014	5,09,317
Shahpur Tahsil	Ara	30,569	82,858	31,992	76,363

Subsequently in accordance with the undertaking of the Punjab Government that the principles of the Land Revenue Amendment Act of 1928 should be applied to Shahpur District, reductions were made as will be seen from the following table of the demands in each assessment circle :—

Circle.	Rabi, 1929.	Kharif, 1929.	Rabi, 1930.	Kharif, 1930.
	Rs.	Rs.	Rs.	Rs.
Bar	4,56,989	2,57,627	3,16,592	2,23,066
Chenab Hethla	22,252	4,005	18,496	4,307
Chenab Utla	41,199	21,729	32,467	18,182
Sobhaga	43,699	17,997	39,636	21,304
Bar Utla	4,74,040	1,46,380	3,68,912	2,22,680
Bar Hethla	2,80,681	1,23,761	2,31,414	1,88,487
Ara	1,00,484	24,203	93,919	43,142

The only area, where the assessment was reduced, was in the Chenab circle of Bhalwal Tahsil below the old *nakka* or edge of the river bed. In this circle a good deal of deterioration has taken place owing to the spread of *kallar*, and the fact that the floods, which formerly proved beneficial, are now less frequent, owing to the quantity of water taken out of the river for irrigation canals.

CHAP. III, C.

Land Revenue.

Extension of irrigation.

The following table will show the extension of irrigation according to the irrigation channels and the chaks affected year by year from 1912 onwards after Mr. Rudkin's assessment had come into force :—

Name of year.	Name of channel dug.	Name of chaks and villages receiving irrigation from No. 2.
1	2	3
29th July 1918 ..	Uppi minor of Jholpur Distributary	Chak No. 19-S.B., Uppi, Rawanwali and Bucha Kalan.
26th October 1919 ..	Memrana minor of Khadir Branch ..	Rahimpur and Kot Ghazi Kalan.
15th November 1919	Kandiwala minor of Lalian Distributary.	Chak No. 53-S.B.
8th November 1920	Tandlian minor of Kirana Distributary.	Chaks No. 113, 116, 119 and 120-S.B.
Kharif, 1920 ..	Fatehpur Distributary of Northern Branch.	Khawajabad, part Sakesar, Tatri and Utti.
Rabi, 1920-21 ..	Lak Distributary of Northern Branch	Nawabpore.
1921-22 ..	Rattokala Distributary ..	Chaks No. 6-A, 6, 7, 8, 9, 10 and 11 (all of these were getting canal water for portion of their areas.)
11th January 1924 ..	Kanion minor of Khadir Distributary	Burani.
30th January 1924 ..	Kazian minor of Chokera Distributary.	Chak Nos. 91-A and 85-S.B.
19th March 1924 ..	Pindi minor of Chokera Distributary	Chak No. 75-S.B.
5th September 1924..	Pilowal minor of Khadir Branch ..	Dharangar.
1924-25 ..	Gharat Distributary	Chaks No. 1, 2 and 3 in Rakh Dharema.
2nd March 1925 ..	Jaspal minor of Hajian Distributary..	Chak No. 75-A.S.B. and Tanguwali.
7th April 1925 ..	Ahmadwala minor of Soda Distributary.	Doda village.
8th April 1926 ..	Baran minor of Khadir Branch ..	Barana. (Jhang District).
6th June 1926 ..	Nasirpur Distributary of Khadir Branch.	Daulatpur, Nasirpur, Jhil and, Chak Miana.
1st July 1926 ..	Badin Distributary of Khadir Branch	Saidnow and Dingrala (Shahpur District).

CHAP. III, C. — Land Revenue. Extension of irrigation—concld.

It must be remembered that the Irrigation Branch is constantly employed in improving the means of irrigation. The various channels are constantly silting up to their proper level and fresh land, which previously was uncommanded by a few inches, comes under command year by year. Some channels, such as the Chaukera minor, have been enabled to carry larger supplies by being raised in places where they run through low-lying country, thus making it possible to provide larger supplies at the tail. Outlets, which are unnecessarily large, have been reduced near the heads of distributaries, in order to give more water to the chaks situated nearer to the tail. Even since Mr. Ram Chandra's village inspections were made, the water supply of many chaks has been considerably improved, and the reasons for the leniency of assessment, which existed in his time, are now no longer valid.

Suspensions and remissions of revenue (page 285).

In the area, assessed by Mr. Ram Chandra, the land revenue is fluctuating, and therefore, suspensions and remissions are not required except for calamities occurring after the crop has been cut. One such occasion occurred in Rabi 1923 when heavy rains in the Kirana Hills caused flooding in the neighbouring chaks, and damaged the grain on the threshing floors. Otherwise the chief danger of damage in the colony area is from flooding and water-logging. The heavy monsoons of 1921, 1924 and 1926 and the floods of 1928 and 1929 caused a good deal of damage in the low-lying areas of Bhalwal and Shahpur Tahsils.

In Bhera sub-tahsil, Shahpur Tahsil, and Khushab Tahsil suspensions still continue. But in the past they have frequently been unnecessarily allowed, for want of consideration of the fact that many villages, near the river, did not depend at all on the kharif harvest, and counted on floods fertilising their land during the kharif harvest for the rabi harvest. Remissions have been chiefly confined to the small area north of Khushab between the hills and the river. These unfortunate villages frequently miss the rain which benefits all the surrounding country. Unfortunately the Rasul Pumping Scheme has not materialized. By this scheme canal irrigation might have been supplied to the country between the Salt Range and the river Jhelum, in both Jhelum and Shahpur Districts, as far south as Khushab. All that can now be done is to improve, as far as possible, the old Corbynwah Canal, which, in view of the approaching inception of the Rasul Pumping Scheme, has recently been neglected. In the Thal the demand is so light that it is ordinarily possible to recover suspended revenue whenever a good harvest occurs.

CHAP. III, C. — Land Revenue. Suspensions and remissions of revenue (page 85)—*concld.*

The Mohar Circle, to the west of Khushab, has deserved suspensions of revenue on many occasions, but remissions are usually unnecessary. The advent of the Sind Sagar Canal would be a great boon to the villages in the north of this region. At present the sandy soil of the Mohar, south of the railway line, is more valuable than the harder soil, to the north, since on the sand-hills it is possible to grow gram even if the rainfall is light.

Colony tenures (page 86).

Mr. Leigh's settlement did not deal with the portion of the district within the perennial irrigation boundary. The administration of the canal colony stands by itself and presents a considerable divergence from the ordinary revenue procedure of the district, since the Collector has to act not only as the head of the agency for collecting revenue and dealing with various disputes about land as they arise, but also as a land agent managing an enormous Government estate. Owing to the very high value of colony land, the work, done by a Deputy Commissioner in charge of a colony district, is of the very greatest financial importance. A small error in judgment or some slight relaxation of control may cause a very large loss of revenue to Government. Much, therefore, depends upon the personal attention paid by the Deputy Commissioner to the management of the colony.

In the past various problems have arisen for which no complete solution is provided in the 1926 edition of the Punjab Colony Manual. Some of these problems are common to all colonies in the Punjab and some are peculiar to the Lower Jhelum Canal Colony.

Exchanges.

The first problem, which invariably confronts a Deputy Commissioner, newly posted to the district, is that of dealing with a flood of petitions for exchanges of land and additions to holdings which are alleged to be smaller than the standard size. With regard to exchanges much difficulty has been caused in the past by the fact that originally great difficulty was experienced in the Lower Jhelum Canal Colony in persuading colonists to go to Shahpur District and to stay there. Great leniency was, therefore, shown in enforcing the conditions, and, whenever exchanges of land were asked, these were freely granted. The process continued until the original squares, in which the land had been allotted, were in many cases so much broken up as to interfere seriously with the irrigation and cultivation of the land. Special anxiety was always shown to obtain an exchange into the squares adjoining the village site, which from their position were naturally by far the most valuable. This was contrary to the instructions originally laid down, which provided that a vacant space should be left for the purpose of what was known

as *charagah* adjoining the village site. This *charagah* was an unfortunate expression, since the only purpose, for which the land was not used, was that of grazing. On the other hand, such vacant spaces provided land for digging pits from which to obtain clay for making houses, these pits subsequently becoming tanks for the storage of water. They were also used as a standing ground where cattle could collect in the morning or evening and in time of plague they were valuable for camping out. In horse-breeding chaks a scheme had originally been evolved in the early days of the colony for irrigated paddocks. This was subsequently revived in the year 1925, and the experiment, although it has not yet been attempted on a large scale, has proved successful in increasing the number of young stock suitable for purchase by the Army Remount Department.

CHAP. II C. Land Revenue. Exchanges—concld.

**Recently it has been laid down for all colonies in the Punjab that*, since exchanges were ordinarily sought in the private interest of the petitioners, and, if sanctioned, caused a considerable loss to Government, such exchanges should not be sanctioned when the grantees had been in possession of their land long enough to be able to make certain that the land was not unculturable. In the case of exchanges sought on the ground that the land had become unculturable on account of water-logging or damage by kallar, it was laid down that in all such cases a reference should be made to the Water-logging Board before an exchange was sanctioned. If this principle is strictly followed, it will not only save Government from very serious losses of revenue, but will also save the local district officers from much unnecessary labour, since, if a single application for exchange is accepted, it is immediately followed by numerous petitions from other persons similarly placed.

In the case of those who have purchased their land, or, having previously been tenants, have acquired proprietary rights in their land by purchase from Government, exchanges have been expressly forbidden.

Izafas.

Similarly *izafas* (additional grants of land), which were so freely allowed in the past, have also been prohibited. This provision applies not only to the eleemosynary allotment of Government waste land to persons who have no right to it, which was too common a feature in the earlier days of the colony, but also to the acceptance of demands made by persons who allege that they have not been allotted the full amount of land, which,

*Senior Secretary's endorsement No. 32-D, dated 7th June 1929, forwarding a note recorded by the Financial Commissioner, Development, to all Deputy Commissioners in charge of Colony Districts, &c.

CHAP. III, C.

Land Revenue.

Fas—ild.

according to the orders of Government, they were entitled to obtain. The usual ground for such petitions was that a square of land was equal to 28 acres or 224 *kanals.* Such claims, however, are entirely baseless. Allotments were made, except where the contrary was definitely expressed in writing in the orders of Government, by squares, each square containing an area varying in accordance with the variations in the base and side lines of the different squares. These variations were the result of inaccuracies in making calculations from the original base lines when the survey of the whole colony was first carried out. Consequently, in some cases, squares were smaller than in other cases. The theoretical area, moreover, of a square was not 28 but 27·7 acres, *i.e.*, 221½ *kanals.* The Deputy Commissioner, therefore, in making any fresh allotment should always regard with great suspicion any calculations in which the area to be allotted is based only upon the number of *kanals* in the area recommended for allotment.

ıds and er-courses.

Another pitfall to be avoided by the Deputy Commissioner is the omission of *inter* and *intra* village roads and water-courses from calculations. According to the rules such roads and water-courses form part of the grant, and are entered in the land revenue records in the name of the grantee and not as being the property of Government.

These two matters may appear to be comparatively unimportant, but experience has shown that in making an allotment, even of a grant of 5 squares, it is possible to make an allotment in excess of the area, sanctioned by Government, of about 5 acres, the value of which at Rs. 400 an acre would be Rs. 2,000. In any area, therefore, in which allotments of land were at all frequent, the disregard of these matters might cause a loss of revenue to Government, which would run into lakhs of rupees.

enations.

Another matter, in which the Deputy Commissioner has to exercise particular care, is applications for permission to alienate. Such applications have to be dealt with under section 19 of the Colonization Act. The Deputy Commissioner is ordinarily empowered in writing by the Commissioner of the Division with authority to exercise the powers of Commissioner under this section; but the authority has to be given afresh in the case of each successive appointment to the post of Deputy Commissioner. *No permission to alienate is of course required in the

*Punjab Government letter No. 2776-D, dated 7th May 1929, to the Commissioner, Rawalpindi Division.

case of those who have acquired proprietary rights in their land. Government tenants should ordinarily be refused permission to alienate their land. If they hold their land on non-service conditions, they can obtain proprietary rights whenever they may think fit to deposit the sum demanded by Government for the purchase of these rights. An exception should only be made in favour of near relations who have helped to develop the grant with money and labour. In the case of horse-breeding grantees, the principle has for some years been strictly observed that, where a grantee has a son of age to think for himself, no alienation should be permitted without the consent in writing of that son, whether that son may have legally attained his majority or not. The prescriptive right, contained in the schedule attached to the Sanad of occupancy rights, laying down that the eldest son, unless considered by the Deputy Commissioner to be unfit to succeed his father, should be appointed as his father's successor, is one which should always be maintained. Considerable numbers of applications have been received in the past from horse-breeding grantees, who have married a second wife, and been persuaded by that second wife to set aside her eldest step-son in favour of her own son. Sometimes these applications are couched in the form of a request that the grantee may be permitted to execute a will disinheriting the eldest son and leaving the horse-breeding grant to the eldest son of the second wife. Such applications cannot lawfully be accepted, since it is only after the decease of the grantee that the Deputy Commissioner can pass orders either accepting or setting aside the eldest son of the deceased. All applications, intended to defeat the right of the eldest son, should be rejected outright. Since this policy has been followed, there have been no cases of murder of horse-breeding grantees by their eldest sons, and, although horse-breeding grantees sometimes allege that they fear such treatment at the hands of their eldest sons, such allegations are absurd, since the eldest son must know well that, even without judicial proof, the Deputy Commissioner would be justified, if reasonable grounds existed, for believing that the eldest son was responsible for his father's death, in setting aside that eldest son in favour of the next heir. The eldest son, therefore, is the last person likely to make an attempt on his father's life, or, in any other way, to render himself liable to be declared unfit to succeed.

CHAP. III, C.

Land Revenue.

Alienations—*contd.*

Considerable care is required in dealing with cases, which arise under section 24 of the Colonization Act, especially where horse-breeders are concerned. Such cases are important, since they may involve the forfeiture of land worth many thousands

CHAP. III, C. — Land Revenue: Alienations — concld.

of rupees either temporarily or permanently. In all cases a detailed order should be passed by the Collector giving, in the case of horse-breeders, a full history of the management of their mares and young stock supplied from the records of the District Remount Officer. It must be clearly be shown that the defaulter has been given an opportunity to appear before the Collector and to state his objections. This fact should be recorded in writing, and the objections, if made in writing, should be specifically dealt with in the order. In cases, where the breach of conditions is of such a kind as to admit of a remedy, a written notice must always be issued allowing one month in which the breach should be remedied, and the receipt of such notice should be shown in proof of service.

Lambardars.

Originally in the colony as few *lambardars* as possible were appointed in each chak. The object of appointing more than one *lambardar* was to provide for separate interests of different communities, where two or more communities were strongly represented in each chak, and a single *lambardar* could not be expected to look after the interests of those not belonging to his community. In general, however, the principle was observed that it is far easier for the administration to deal with a single *lambardar* than with two or three, and, where horse-breeding conditions had to be enforced, this was especially important. All applications for an increase in the number of *lambardars* need the sanction of the Commissioner under Land Revenue Rules, and it was laid down, some years ago by the Commissioner of Rawalpindi Division, that as few *lambardars* as possible should be appointed, regard being had rather to the efficiency of administration than to the wishes of the various aspirants to the post. An exception, however, has always been made in favour of influential persons holding considerable areas of land in any particular chak. These persons have been appointed *lambardars* for their own land only, and they are not allowed to have any share in the management of the *kamins*' square. Not being peasant grantees, they are not entitled to a *lambardari* square or a portion of the *lambardari* square. This arrangement is in accordance with the provisions of the Land Revenue Rules, since such persons do not reside in their chaks themselves, and almost invariably appoint an agent to look after their lands, and to do the work of a *Sarbarah lambardar*. According to the Land Revenue Rules, non-resident *lambardars* can only appoint an agent as a substitute, if they own the whole of the portion of the estate for which they are *lambardars*. Numerous cases have occurred in which influential persons have urged strongly

that they should be allowed to hold the post of *lambardar* and to appoint their agent to act as *lambardar*, despite the protest of other residents in the village. Such applications are frequently objectionable on the ground that the other residents in the chak are persons of considerable social standing, and object strongly to having paid servant who might be of inferior social standing to themselves, sitting over them to do the work of a *lambardar*. But the main objection to such applications is the fact that they are directly contrary to the provisions of the Land Revenue Rules.

CHAP. II C.

Land Revenue.

Lambardars **concld.**

Lambardari **squares.**

The general rule with regard to *lambardari* squares is that they should only be allowed in peasant chaks. It is sometimes difficult to define exactly what is a peasant chak, but it may be accepted that no land-holder, holding more than 2 squares of land, should be considered to be entitled to a *lambardari* square, unless he or his predecessors in interest had originally been horse-breeding peasant grantees and had acquired additional land in the chak by purchase. No non-resident *lambardar* should be allowed to have a *lambardari* square. In chaks, where there are more than one *lambardar* and more than one *lambardari* square has been allotted, reductions can be made when any post of *lambardar* becomes vacant. The principle, ordinarily observed, is that there should not be more than one *lambardari* square in any one chak, and, where there is more than one resident *lambardar*, the square should eventually be divided up between them, if it is considered essential to retain more than one *lambardar* in the chak. When a *lambardari* square falls vacant adjoining the village site and the chak has not sufficient *charagah* adjoining the village site, and another square of land is available at a greater distance, an opportunity occurs of turning the *lambardari* square into *charagah*, and giving in its place a *lambardari* square more remote from the village site. No compunction need be felt about taking such action in the common interest, since the present emoluments of a colony *lambardar* are very handsome and even the allotment of a square of land remote from a village site is a very valuable consideration for the services rendered by the ordinary *lambardar*.

Kamins' **squares.**

The area of land in the Lower Jhelum Canal Colony, to be allotted to *kamins*, is fixed at 32 *killas*. *Kamins* hold the land as sub-tenants of the *lambardar* and are liable to eviction at the end of the *rabi* harvest, if notice is given to them before the 15th of November. Cases of dispute, between *lambardars* and *kamins*, are dealt with by Tahsildars and Naib-Tahsildars, appeals coming before the Collector. Complaints made by *kamins* of harsh

CHAP. III, C. Land Revenue. *Kamins' squares—concld.*

treatment on the part of *lambardars* should be received with caution. The *lambardar* is responsible for the good government of the village and he must be allowed to take suchs teps as he thinks necessary with regard to the *kamins*. They do not pay anything except *malikana*, land revenue, water-rates and cesses for the enjoyment of their land, and they can have no grievance, if they are evicted by the *lambardar*, provided that the ordinary requirements of the Tenancy Act are complied with. Recently orders have been issued that the *begaris* in each chak should be made responsible for the maintenance in good order of the *inter* and *intra* village roads in return for the privilege of being allowed to cultivate their land. The *lambardar* should be required to see that these duties are fulfilled by the *begaris*, and the Tahsildar, the Naib-Tahsildâr and the Qanungo concerned should see that the *lambardar* does his duties in this respect.

Charagah.

It has already been pointed out that the expression "*charagah*" is a misleading one, since the *charagah* is not utilised for grazing. The expression, however, has been used for so long that it would be difficult to substitute any other expression for it. The *charagah* in Shahpur District is of two kinds—*charagah nazd abadi* and *charagah dur az abadi*. Originally it was intended that a certain open space should be left near the village site to serve for the excavation of clay to build houses, the digging of tanks, possible extensions of the village site, a standing ground for cattle and an encamping ground in time of plague. This land could also be utilised for village schools and school play grounds. Unfortunately these reserved areas have, in many cases, been encroached upon, and efforts should always be made, as occasion offers, to have such lands vacated, when a *lambardari* square falls vacant, or exchanges can suitably be made of land held by *kamins*. The *charagah*, more remote from the village site, has not the same value, and once arrangements have been made to secure sufficient common land near the village site, there would be no objection to this land being disposed of. A good deal of this land is already under temporary cultivation.

Zakhiras.

Originally plantations of trees (*zakhiras*) were maintained by tree planting tenants. In the year 1924 these tree planting grants were abolished. Those tenants, who had fulfilled their conditions, were allowed to retain their grants as ordinary non-service peasants, and other grants were forfeited either wholly or partly. The area, usually $3\frac{1}{2}$ *killas*, under the actual plantation, was handed over to the District Board, which entertained an enormous and possibly somewhat apocryphal staff to look

after these plantations and the land attached to them. Subsequently in 1924 most of the land, attached to the *zakhiras* and confiscated from the tree-planting defaulters, was sold by auction. The District Board is still responsible for looking after these plantations of trees, and, in order to ensure that the trees should not die for want of water, arrangements have been made to lease out the land underneath for the cultivation of crops, such as *mung* and *mash*, during the *kharif*, under the trees. Generally speaking, however, these plantations are in a bad way and the only scheme, which affords any prospect of success, is that they should be replaced gradually with plantations of mesquite (*prosopis juliflora*) which can thrive without water. Where such plantations are remote from the village site, it would be advantageous to transfer them to the *charagah* adjoining the village site, where they could serve one of their original purposes of affording shade to the inhabitants of the chak during hot weather.

CHAP. II C. Land Revenue. *Zakhiras*—concld.

Areas reserved from allotment.

Excepting auction chaks, the rule, originally laid down in the Lower Jhelum Canal Colony, was that 10 per cent. of the total culturable commanded area, excluding *ghair mumkin* land, should be reserved from allotment. This reserve, however, intended partly to serve as *charagah*, adjoining the village site, and partly for exchanges in cases where it was found that any particular grantee had a considerable proportion of unculturable land in his grant. This minimum reservation, however, was disregarded even in the early days of the colony and some of the most fertile chaks, especially in the neighbourhood of Bhagtanwala, retained but a very small fraction of the required percentage unallotted. Further reductions were made by unauthorised grants made by subsequent Colonization and Assistant Colonization Officers, and, when reward grants for services in the war were made after 1918, in many cases, land was allotted to grantees in chaks where less than 10 per cent. of the land remained unallotted. Constant vigilance is required on the part of the Deputy Commissioner to ensure that, when new allotments are made, these are not sanctioned in land adjoining the village site, or in chaks, where the unallotted percentage is less than 10 per cent.

One objection to the allotments, made after 1918, was that frequently, in horse-breeding chaks, non-horse-breeders were introduced, thus causing considerable complications from the administrative point of view. In many cases the new grantees found their position so uncomfortable that they applied for exchanges and these were always freely allowed.

CHAP. III. C.

Land Revenue.

Abadis.

The management of village sites presents a certain amount of difficulty owing to laxity of administration in the past. There is a record of rights for each colony village site and it is easy to ascertain exactly how many sites each resident of the chak holds. All residents of chaks at present hold their land within the village site as non-occupancy tenants of Government and are liable to eviction at any time. Their only right is to remove the material of their houses. Shop-keepers are sometimes evicted when they make nuisance of themselves, and are generally complained of by the cultivators of the chak. *Land-holders are allotted one site for every square which they hold. *Lambardars* may be given an extra half site only in virtue of their office. Large landholders are allotted one site for every square held by them in the chak up to a maximum of 6 sites. *Kamins* and tenants are ordinarily allowed half a site. Recently a survey of the colony has been made by Khan Khaliq Dad Khan, Colony Assistant, who has recorded remarks about all village sites in the colony and dealt with all cases of allotments in excess of requirements. Care should be taken in future to see that additional sites are not unnecessarily allotted in chaks and more especially that the village site is not utilised for ordinary cultivation or for the planting of gardens. The general question of the policy to be followed in such matters is under the consideration of Government.

Colony towns.

These were originally located at Sargodha, Bhalwal, Phularwan and Sillanwali. The general practice of Government was to discourage *mandis* from springing up in other places, and, although a few shops have been built up at Handewali, Shah Nikdar and Ajnala, no regular *mandis* exist in these places.

Originally colony towns were managed directly by the Colonization Officer and his Assistants. Income was credited to a town fund.† Later on, the towns became notified area committees and eventually municipalities or small towns. The result of this gradual transition was that many matters, which could safely be left in the hands of officials, became subject to a certain amount of mismanagement when left to the local bodies with non-official presidents and a majority of elected members. Apart from the ordinary problems of municipal administration, the Deputy Commissioner is chiefly concerned with (*a*) the development of colony towns, (*b*) the observance of colony conditions, and (*c*) the management of Government waste lands within municipal limits.

*Colony Manual, volume I (revised, 1926), page 215, section 418.

†Colony Manual, volume I (revised, 1926), page 263, section 529.

CHAP. III, C. Land Revenue. Town planning.

Originally plans were carefully drawn up for all the colony towns; but these were lost sight of and in some places, for instance at Phularwan, haphazard extensions were devised and partly carried out. All town planning schemes require careful consideration on the lines laid down by the Town Planning Committee of 1914. The first requirement is that the whole area should be carefully surveyed and the levels plotted out on a map, with a view to making the most convenient arrangements for the future drainage of the area. The next important point, to be looked to, is the provision of adequate communications. Then regard has to be paid to such considerations as arrangements for locating various classes of buildings, where these will be most conveniently situated. In the neighbourhood of a railway station land is valuable for commercial purposes, and, therefore, it would be unwise to propose, as was once done at Sargodha, to have an educational centre immediately opposite the goods station.

According to the Crown Grants Act of 1895 it is legal for Government to sell land, to which certain conditions are attached, and these conditions can be enforced by a court of law. It is, therefore, open to Government to lay down conditions on which it is prepared to sell land in colony towns and to enforee these conditions, and such action has in the past been taken on the principle that it is in the interest of the development of colony towns, that they should be constructed in accordance with the definite scheme of town planning, and should not be allowed to grow up haphazard, as is the case with towns in other parts of the province. Although proposals from time to time have been made that the conditions, on which land in colony towns was sold, should no longer be endforced, Government* has decided that it would be unswise to allow these conditions to be broken.

The usual reason, for which conditions are broken by the owner of sites, is pecuniary profit. A site, which was bought cheap for the purpose of a residence, may be worth twice as much if it is used as a shop. A single site of a size, fixed by the authorities as being sufficient to afford ample accommodation for one family, may be worth considerably more if split up into a lot of instanitary tenements. Unfortunately in the past it has only too often been left to municipal, notified area and small town committees to deal with applications for permission to build, and these committees have not referred such applications to the Deputy Commissioner for sanction as should have been done. The result has been that, with the sanction of the local bodies,

*Letter No. 755-C, dated 16th October 1929, from the Senior Secretary to the Financial Commissioners, Punjab to the Commissioner, Multan Division.

CHAP. III, C.

Land Revenue.

Town planning—concld.

buildings have been erected which contravened the conditions on which sites were originally sold. Such a sanction, when given by a local body, is only given under the provisions of the Municipal or Small Towns Act, and does not relieve the owner of the site from the obligation to comply with the conditions on which the land was originally sold to him or to his predecessor. The Deputy Commissioner, therefore, should be careful to arrange that all such applications are sent to him or to one of his assistants for scrutiny in order to ensure that the original conditions, on which the land was sold, are being complied with.

Where a breach of such conditions has occurred, two courses are open. If the breach of condition is open to a serious objection on sanitary or other equally important grounds, drastic action should be taken to ensure compliance with the conditions of sale. If, on the other hand, the breach brings in some pecuniary profit to the owner but is not open to any serious objection otherwise, the breach may be condoned on the payment of a sum to be fixed by the Local Government on the recommendation of the Deputy Commissioner. In dealing with such cases, it is important to remember that, where other persons have purchased sites for a particular purpose and have been kept strictly to the conditions on which they purchased those sites, but in one case an exception has been made in favour of some person, without his being called upon to make any additional payment for the site, a suit in a civil court might lie against Government for permitting competition on unfair terms by such a person. It would obviously be unfair to sell a site to one man for a factory at a price of Rs. 20,000 and sell another site of the same size next door to another man for a garden for Rs. 500 and then to allow the owner of the garden to build a factory on his site, and to compete with the original factory owner who had expended far more capital in purchasing a site for his factory.

Such breaches of conditions frequently occur in connection with sites in civil stations, where originally a compound of many acres in extent has been sold for the purpose of erecting a bungalow. The owner subsequently divides this up into small plots, and constructs four or five bungalows. This should never be allowed. Strict orders should be issued that all mutations in urban areas should be sent for attestation to an Assistant Collector of the 1st grade, who will be careful to see that conditions, on which the land was originally sold, are not broken in giving effect to the mutation.

CHAP. III, C. — Land Revenue. Government waste land.

The transition, from the direct control of the Colonization Officer to the administration of a municipal or small town committee with a non-official president, has caused special difficulties in connection with the management of Government waste lands. In some places, for instance at Bhalwal, no doubt these lands are well managed and bring in a large income to the local body. In others, especially in Sargodha and Sillanwali, the local bodies have misused these lands, leasing them out at a low rate to contractors, and frequently remitting the demands on the ground that the contractors found it difficult to pay the rent demanded. Local bodies are not empowered to lease out such lands for more than 5 years at a time without the sanction of higher authority and all such leases must contain a condition that, if the land is required by Government, it will be surrendered immediately.

Assessment of colony towns.

The original urban settlement of the colony towns in Shahpur District was made by Sir Malcolm Hailey but no regular assessment report was prepared. Factory, residential, shop and godown sites in the towns were asssessed at rates varying from Rs. 2 to annas 8 per site and residential and factory sites outside the towns were assessed at Rs. 10 an acre. This settlement was revised by Mr. Gibson in 1917, but in this case too no regular assessment report was prepared in the form ordinarily followed in such cases. The sanction of Government was accorded to the imposition of rates varying per marla from Rs. 3 to annas 2 for residential, shop and godown sites in the towns, and outside the towns bungalow and factory sites were assessed at Rs. 5 and Rs. 20 per acre, respectively. Various exemptions from assessment were allowed. In 1928 a more detailed assessment report was prepared by Mr. A. C. Macnabb, Deputy Commissioner, with the assistance of Mr. A. MacFarquhar. In that report the whole previous history of the case was given in full. The rates of land revenue, sanctioned in Mr. Gibson's settlement, were not revised since it appeared to Government to be unnecessary to do so ; but various other matters dealt with in the report, are under the consideration of Government. Perhaps the most important is the administration of Government waste lands in colony towns. Definite orders are required with regard to the various plots of land now managed by the local bodies, and, in some cases, turned by them into municipal gardens, &c., without any regular authorization from the Local Government. It is also important that a regular *girdawari* should be carried out, once a year, by the revenue staff to ensure that the conditions of sale are duly being observed in the case of land already disposed of, and that no encroachments have taken place on unallotted Government waste land.

CHAP. III, C.

Land Revenue.

Tharras.

The question of *tharras*, or platforms in front of shops and houses, running along the sides of the important streets, is one which calls for particular attention from the Deputy Commissioner. These *tharras* exist in Sargodha, Bhalwal, Phularwan and Sillanwali. They belong to Government, and rent in the past has some times been charged for them at varying rates. In 1924 the Municipal Committee of Sargodha was directed to enhance its rent with a view to encouraging the owners of shops and houses behind the *tharras* to purchase them outright. The municipal committee did its best to avoid taking any action, which might encourage such sales. Eventually it was decided by Government that, although in other cases of mismanagement the Local Government had refused to resume the lands, which were being managed by the local bodies in Shahpur District, in this case it would be necessary to do so, since the Municipal Committee of Sargodha had evaded fulfilling its obligations. The management of these *tharras*, therefore, is now in the hands of the Deputy Commissioner.

Deeds.

Considerable trouble in the past has arisen from the fact that in many cases, where a properly stamped and registered deed should have been taken from vendees, grantees and lessees of Government waste lands, this has not been done. Orders have recently been issued that in all cases, except where special exemptions have been granted, the purchasers of Government waste land should execute, stamp and register at their own expense sale deeds embodying the conditions of sale, since without such a sale deed it is difficult to enforce the conditions on which the land was sold. In the case of grants of land, where a legal set of conditions exists and can be enforced under the Colonization Act, it is not necessary that any deed should be executed ; but, in the case of leases of land for temporary cultivation, such leases should be executed and stamped, and, where necessary, registered at the expense of the lessee.

Temporary cultivation.

In the early days of the colony the temporary cultivation of unallotted areas was encouraged, since plenty of water was available and the land in this way was levelled. It was even noted in the 1926 edition of the Colony Manual, Volume I, paragraph 425, that the temporary cultivation on the *charagah* round the village site was no bad thing. The lessee paid land revenue, cesses, water-rates and *malikana* at the ordinary term of annas 6 in the rupee of land revenue. Such temporary cultivation was naturally very profitable to the lessee and eventually orders were issued in Punjab Government letter No. 251—659—2982, dated February 2nd, 1924, that a rent of at least Rs. 10 an acre should be taken.

No proper system for the leasing out of land on temporary cultivation existed however, and the income obtained by Government was comparatively small. In 1925 a second Colony Assistant was posted to the district partly in order to help generally with colony work, which had fallen into a very regrettable state of confusion, and partly to assist in the leasing out of land for temporary cultivation. It was arranged that leases should be given for a period of one year, *malikana* being fixed at four times the land revenue in the case of land away from the village site, and five times the land revenue, in the case of land adjoining the village site. Where more than one applicant was forthcoming for the same plot of land, the lease was auctioned and it was found that lessees could frequently pay as much as Rs. 30 an acre for superior land. *Subsequently orders were issued in Punjab Government letter No. 3276-D, dated August 16th, 1926, sanctioning the lease of inferior waste land for 5 years at a time, *malikana* being fixed at four times the land revenue for land adjoining the village site and three times for land elsewhere. These new arrangements brought in revenue by way of *malikana*, land revenue and water-rates of several lakhs of rupees a year. The cultivation of *charagah*, adjoining the village site, was allowed on the condition that it was only cultivated for sufficient time to enable it to be levelled and that all the land, adjoining the village site, was not cultivated at the same time. The survey, recently made by Khan Khaliq Dad Khan, Colony Assistant, of all the colony chaks in the district, will prove of great value in dealing with the case of temporary cultivation, since, if this matter received the careful attention of the Deputy Commissioner, the large income, already received by Government, could be considerably increased.

CHAP. III, C.
Land Revenue.
Temporary cultivation— *concld.*

Section E.—Local and Municipal Government.

The District Board has now an elected majority since there are 28 elected members and only 14 non-official and official nominated members. The total number of members is thus 42 which is considerably less than the total number in other districts of minor importance. The District Board meets nearly once a month and the sub-committees, on one or other of which all the members of the District Board sit, hold meetings and discuss in great detail the various questions which have to be decided the next day. Since 1923 the activities of the District Board have largely increased and it has emerged from a state of

District Boards (page 290).

*Punjab Government letter No. 888-D., dated March 3rd, 1925, sanctioned *malikana* a three times the land revenue but in practice it was found possible to demand higher rates.

CHAP. III, E. — Local and Municipal Government. District Boards (page 200)—*concld.*

bankruptcy and chaos into one of efficiency. This is partly due to the introduction of a revised system of accounts and better administration, and partly to the increased revenue accruing from the results of Mr. Ram Chandra's re-assessment of a large part of the district, and the decision of the District Board in 1925, shortly before the visit of His Excellency the Governor, to raise the local rate to its legal maximum. A *Haisiyat*-Tax has been introduced and brings in a considerable revenue, although at one time legal difficulties interfered with its realization. The District Board is now the second most important in the Province, coming only after Lyallpur. It has embarked upon schemes in which steady progress is assured through the rationing of its regular net income between the various spending departments. The expansion of education and medical relief have been very rapid. At present the District Board is in charge of 90½ miles of metalled road and 1,094¾ miles of unmetalled road excluding the arterial roads from Lahore to Mianwali and from Sargodha through Kirana to Lyallpur, which are in the charge of the Public Works Department. Early in 1926 the District Board resolved to apply to Government for a loan in order to finance a scheme for 56½ miles of metalled roads in various parts of the district at a total cost of nearly 7½ lakhs of rupees. So far no other district board in the province has shown such enterprise in this direction. Later, in 1928 a loan of 1½ lakhs of rupees was also taken for improving unmetalled roads.

Municipalities (page 291)— Bhera.

The prosperity of this town has remained stationary. In 1922-23 the Tahsildar of the Tahsil ceased to be the president of the municipality and ever since the municipality has been torn by dissensions of even greater extent than before. Faction feeling is so bitter as to endanger efficiency. The result is that the public works of former days are gradually falling into neglect. The storm water drainage scheme has considerably improved the salubrity of the town. This was completed in the year 1917. There is, however, no drainage scheme for the disposal of sullage water, and one is urgently required. Funds for this are to be provided by the sale of *nazul* and municipal lands, but attempts to dispose of these so far have not met with success. The extension on to Shahpur of the railway line, which now runs from Malakwal to Bhera, would restore to some extent its former prosperity to the town, which has already benefited greatly by the opening of the direct road to Bhalwal.

Khushab (page 293).

This town has now been provided with a water supply at a considerable cost. The water is pumped from the river bed where masonry wells have been sunk. The results have not been

wholly satisfactory in the past, owing to floods in the river. The local high school has been provincialised thus relieving the municipal committee of a considerable burden. Owing to the heavy expenditure on the water supply the financial difficulties of the committee are, however, very great. The connection of Khushab with Sangla Hill by rail, and the construction of a road and railway bridge over the river Jhelum will materially add to the funds of the municipality, which has greatly profited from the improvement of road communications with the Salt Range and Mianwali District. The municipality is deriving a handsome income out of the lorry and tonga stand which has been necessitated by this traffic. The municipal committee is now presided over by a non-official president.

CHAP. III. E. — **Local and Municipal Government.** Khushab (page 293)—*concld.*

This municipality forms a pleasing contrast to most of the municipalities in the district in that it is run with commendable efficiency, if one takes into consideration the general decadence of the place and its declining prosperity. The richest business men in Sahiwal went to Sargodha and stayed there, when the Lower Jhelum Canal Colony was founded . The leading family in Sahiwal is the old Biloch family which originally ruled over this part of the country. Sardar Fateh Khan, Honorary Magistrate, the uncle of the head of the clan, is the president of the municipality. The drainage scheme remarked upon by Mr. Leigh is still wanted and at present funds are not available for it. The metalled road from Sargodha to Sahiwal was completed in 1928. Now that the road has been completed, the fortunes of the town should begin to mend. The municipality profits largely from its share in the rent of the lorry and tonga stand.

Sahiwal (page 295).

The District Board has also metalled the road from Sillanwali to Faruka. Beyond Faruka the unmetalled road to Sahiwal has been put into good order. Sahiwal is thus connected with the railway on two sides by good roads. If the railway line from Malakwal and Bhera to Shahpur could be continued through Sahiwal to meet the Malakwal-Shorkot Road near Shah Nikdar Station, the town of Sahiwal might recover its ancient importance in the district.

This municipality since August 30th, 1929, has had an official president in the Revenue Assistant. It had been noted for many years past in the Annual Provincial Reports as the most inefficient municipality in the province. The lack of sanitation in the town was almost beyond belief, and the death rate in years of fever was appalling. The gambling, for which the town used to be celebrated especially at the time of the Diwali

Miani (page 296).

CHAP. III. E.

Local and Municipal Government.

festival, is now, for the most part, a thing of the past owing to energetic action by the police and the local Zaildar Chaudhri Umar Hayat, Gondal.

Sargodha (page 297).

This municipal committee has now a non-official president. It is the one municipality in the district which has as large an income as it needs, in spite of the recent expenditure of four lakhs on the extension of its water supply.

A good deal of the income is derived from the management of Government waste land within municipal limits. This has never been formally handed over to the municipal committee by Government, and its administration by the municipality in the past has not been very successful. The state of the roads in the city and the civil station leaves much to be desired and the roads are falling further and further into disrepair. Within the city the practice of stabling cattle in the smaller streets is almost universal. The larger streets are occupied by the wares of merchants and the beds of sleepers.

The town is flourishing and the direct connection by rail with Lahore through Chiniot will largely increase its prosperity.

Notified Areas. Phullarwan (page 301).

This is the only notified area remaining in the district. The Naib-Tahsildar of Bhalwal is still the official president. There are two other members, both nominated.

The Mandi has a water supply, which is now functioning, and a drainage system. The latter sometimes gives trouble especially when heavy rain falls, as happened in the monsoons of 1924 and 1926. The drainage is constructed against the general slope of the land, and when the rainfall is heavy and the country becomes at all flooded, the drainage finds its way back into the town.

Small Towns. Shahpur City (page 299).

This, like all other notified areas in the district, except Phularwan, has now become a small town under the new Small Towns Act.

The main difficulty of Shahpur City is lack of funds. Mian Ata Muhammad, Pleader, is an energetic and successful president of the small town committee.

The advent of the railway from Sargodha to Khushab will no doubt help Shahpur City considerably, and now that the bridge over the river Jhelum has been built, the income from rent of the lorry, and *tonga* stand will no doubt largely increase. Till then, however, not much can be expected.

The city is still liable to floods from the north when the river rise. A small *band* has been made ; but it is not large

enough. It is most important that the defences of the town on the north side should be strengthened.

CHAP. III, E.

Local and Municipal Government.

Shahpur Civil Station (page 299).

This small town is in a fairly prosperous financial condition, largely owing to the rent of the lorry and tonga stand for traffic plying between Sargodha and Shahpur. The civil station now has a somewhat deserted appearance. A scheme has been carried through to utilise the Government waste land available there, as well as the old Government buildings, not required for any other purpose, in order to found an Intermediate College for the district. Shahpur Civil Station will be the junction between the Sargodha-Khushab and the Malakwal-Shahpur railway lines, and, when the second of these lines has been constructed, Shahpur Civil Station may look forward to better days.

Bhalwal (page 300).

This small town has both a drainage scheme and water-works. As in the cases of Phullarwan, Sargodha, and Sillanwali, the water supply is derived from the canal. Now that Bhalwal is the headquarters of the Tahsil and has a dispensary, a veterinary hospital, and a high school, as well as a *mandi*, its importance is rapidly increasing, although the bulk of the cotton trade is still absorbed by Sargodha and Phullarwan.

The small town committee is efficiently led by its president the Sub-Assistant Surgeon Rai Sahib Nand Lal, whose fame as an operator in cataract cases has extended far beyond the limits of the district.

Sillanwali (page 302).

This small town also has a non-official president. A water supply and drainage scheme is now to be carried out.

The metalled road to the west has been extended to Faruka. Sillanwali is a prosperous place, but the administration of the small town committee leaves much to be desired in the way of efficiency, especially in the management of Government waste land.

Section F.—Public Works.

Public Works (page 303).

After a short interval, during which Sargodha was not the headquarters of a Buildings and Roads Division, an Executive Engineer has again been posted to the district. He holds charge of Shahpur and Mianwali Districts, and has one assistant at Sargodha and another at Mianwali.

The principal works, recently carried out by the Public Works Department, have been the extension of the Lahore road from Bhagtanwala to the bank of the river Chenab at Talibwala, and the preparation of the boat bridge at Talibwala.

40 D type and 11 F type quarters for clerks and 10 E type quarters for peons have recently been built at Sargodha.

Section G.—Army.

CHAP. III, G.

Army (page 304).

The 53rd Silladar Camel Corps no longer has its headquarters at Sargodha. The old camel grazing ground of Rakh Dhareman and the Camel Corps lines in Chak 53 (*a*) N.B. have been handed over to the Punjab Government for colonization.

Military camels still graze in parts of the Salt Range.

Section H.—Police and Jails.

Police (page 305).

The strength of the police force on the 1st of January 1930 was as follows :—

Rank.	*Number of officers.*
Inspectors	3
Sub-Inspectors	27
Assistant Sub-Inspectors	6
Head Constables	91
Constables	501

Police stations (page 306).

A punitive police post was located at Mardwal originally in consequence of troubles in connection with recruiting in 1918. Khilafat agitation was subsequently responsible for the continuance of this post, and also the imposition of one at Uchhala. As a result of the murders at Bhukhi in 1923 a punitive police post was imposed on the villages of Bhukhi, Dhaka and Khabakki. After the Bhukhi murderers had been caught, the only punitive police post remaining in the Salt Range was at Mardwal. This was removed when the inhabitants paid for the construction of a road from Naushahra to Khabakki through Mardwal in 1927. A punitive police post had to be re-imposed in the village of Choha owing to a succession of murders, which were concealed by the inhabitants, and were not immediately reported to the police.

Outside the Salt Range a punitive police post had to be located at Haveli Nathoka in 1925 on the river Jhelum where a considerable trade in stealing cattle took place.

In the cis-Jhelum area punitive police posts were located for some time at Bahk Lurka owing to the murder of the Tahsildar at that place and at Lak on account of the Lak riots in 1918. Recently punitive police posts have only been required in connection with the cutting of canal banks for which events they are probably the only effective remedy. As a rule, a punitive police

post in a village for one year is sufficient to cure a tendency to this particular form of mischief for a couple of decades. Such posts have in recent years been located at Matila, Chak 104-N.B. and Chak 52-S.B.

CHAP. III, H.

Police and Jails.

Village watchmen (page 307).

The pay of *chaukidars* was raised to Rs. 8 per mensem in 1921.

Criminal tribes, villages and individuals (page 308).

The regular criminal tribes still appear to do but little harm in the district. There is a well known and most respectable tribe of Nats, who were settled years ago by Sir Malcolm Hailey in Chak No. 131-S.B. They are famous for their athletic performances and give exhibitions of juggling and feats of strength before the most exalted personages all over the country. Their leader is Bura, who is accredited with being well over 100 years old, but is probably still some 15 years short of his century. Even so he displays remarkable strength and activity, and is a central feature of all activities and gatherings in the district, such as the Sargodha Horse Fair.

The history of the Salt Range dacoits from the year 1920 onwards will be found on page 34. The most famous of them was Tora, who imitated Robin Hood in that he robbed the rich to help the poor, and achieved considerable popularity during his lengthy career of crime. He spent his time between the Salt Range and Chak 37-N.B., to the north of Sargodha, where he was harboured by Shahab-ud-Din and Kamal-ud-Din, two brothers of a family which came from Khura and had settled in Mitha Tiwana as the Pirs of the Tiwanas of Mitha Tiwana. Kamal-ud-Din was dismissed from his post of *lambardar* in the chak, and both he and his brother Shahab-ud-Din had their horse-breeding grants of land confiscated by Government in 1926. Tora was eventually arrested while crossing the river Jhelum, and was duly hanged.

Later on Arif Shah, who like Tora was a resident of Attock District, was brought in by some residents of Bhukhi village into the Salt Range to help in a family quarrel. He was killed and one of the three brothers—Jahan Khan—was also killed before any arrest was made. Subsequently the remaining two brothers Amir Khan and Ali Akbar, together with Samanda of Khura, a proclaimed outlaw, who had returned to the Salt Range to help them, and Hidayat Ali, another proclaimed outlaw, who had returned to the Salt Range, in order, if possible, to kill Samanda, were all caught and finally hanged in the year 1925.

CHAP. III, H.

Police and Jails.

Criminal tribes, villages and individuals (page 308)—concld.

The village of Padhrar is no longer notorious for crime. For this improvement the war must be held responsible. Padhrar had produced a very large number of recruits and now that it is at one end of the main artery of communications by motor lorry, it should not relapse into crime. Mardwal village has also been almost entirely cured in the same way. Other troublesome villages in the Salt Range are Choha, Makrumi, Shakarkot and Kalial. But probably the most difficult village to deal with is still Khura, where there are three important parties headed by Mir Abdulla, Ghulam Husain and Nizam-ud-Din, the father of Shahab-ud-Din and Kamal-ud-Din referred to above. This village has a long and sanguinary history of blood feuds to live down. It is to be hoped that its position on the main road leading from the Salt Range to Khushab will have a civilising influence upon its reputation.

In the cis-Jhelum area the most notorious tribes are the Ghugs of Hadda and the Jaspal Bilochis of Chak 10-M.L., both of which had been declared to be gangs under the Criminal Tribes Act. As will be seen from table 48, during the war crime decreased rapidly, but when peace was declared, a reaction set in. The number of cognizable cases, which had fallen from 1,575 in 1913 to 959 in 1918, rose to 1676 in 1921. As the result of strenuous efforts by the Deputy Commissioner, Mr. Ogilvie, and the Superintendent of Police, Mr. Iver, the number of cognizable cases in 1923 fell to 1,105. Since then crime has remained at about the same level.

Section I.—Education and Literacy.

Education and literacy (page 312).

Since Mr. Leigh's Gazetteer was written the number of secondary schools in the district has rapidly increased. The most important educational development has been the foundation of an Intermediate College at Shahpur in 1929. This College utilises the old district headquarter buildings at Shahpur, and the large area of Government land there available. It has also relieved those who were responsible for the Islamia High School at Shahpur of a very considerable burden.

The next most striking development has been the institution of a high school at Naushahra in the Salt Range in 1926. Great enthusiasm was shown by the inhabitants of the tract and, although there are but few men among them who are even moderately well off, a sum of about Rs. 4,000 was subscribed as a token of the eagerness of the inhabitants of the Salt Range to improve their educational facilities. A site has been selected for a new high school building, but construction has not yet been taken in hand.

The following table gives a complete list of secondary schools in the district :—

Government High Schools—

Section J.—Medical.

Hospitals and dispensaries (page 316).

In 1926 a great stride was made in the extension of medical facilities in rural areas. The Punjab Government provided funds for the erection of cheap rural dispensaries. These grants were supplemented to a small extent by the District Board in

CHAP. III, J.

Medical.

Hospitals and dispensaries (page 316)—concld.

order that substantial buildings might be erected, and 11 hospitals and rural dispensaries were rapidly opened in the district. These met a long felt want and several of the new dispensaries had a daily attendance of about 100 almost as soon as they were opened.

The new Civil Hospital outside the town at Sargodha was opened by His Excellency Sir Malcolm Hailey in March 1925.

The following is a complete list of the medical hospitals and dispensaries in the district :—

GOVERNMENT HOSPITALS AND DISPENSARIES.		DISTRICT BOARD HOSPITALS AND DISPENSARIES.		CANAL DEPARTMENT HOSPITALS AND DISPENSARIES.	
Serial No.	Name.	Serial No.	Name.	Serial No.	Name.

		20	Sakesar.		

Village sanitation (page 317).

In the year 1924 the innovation of the appointment of a District Medical Officer of Health was made. He relieved the Civil Surgeon of much of his responsibility for the prevention of epidemics. The innovation has proved successful and in recent years the district has been comparatively free from serious epidemics. A good deal of the credit for this must be given to the inhabitants of the district themselves. It is no doubt easy in a canal colony, where the *lambardar's pachotra* amounts to an important sum, to ensure by occasionally forfeiting the *pachotra* of a *lambardar* for not reporting an outbreak of plague or cholera, that all such reports will be received at once; but it must be said

CHAP. III, J. — Medical. Village sanitation (page 317)—*concld.*

to the credit of the district as a whole that the inhabitants are singularly prompt in reporting even the death of the first rat. Consequently most epidemics have been stamped out before they have spread to any important extent.

Jhawarian is a perennial focus of infection for plague; but persistent efforts have been made to deal with the rats which swarm in the town. The improvement of communications and the extension of the telegraph have made it easy for the District Medical Officer of Health speedily to reach the centre of an outbreak.

In the towns sanitation has not greatly progressed. At Sargodha the back streets are utilized for the tethering of cattle, and, although the Deputy Commissioner is in a strong position with regard to the removal of more permanent encroachments, such as booths and platforms for the sale of goods in the streets, the attitude of the municipal committee with regard to cattle must remain an obstacle for the progress of sanitation.

At Bhera, although the storm water drainage scheme was carried out in the year 1921 and has since proved a great benefit to the city, no attempt has been made to deal with sullage. Miani is almost incredibly insanitary, and this state of affairs is probably responsible for the constitutional lethargy of the inhabitants who appear to be incapable of doing anything to improve local conditions.

At Khushab a water-supply system was completed in the year 1924, but the floods of 1929 seriously damaged the wells which had been sunk in the river and the state of affairs in the town cannot be considered very satisfactory. No provision has yet been made for drainage. Lack of funds is largely responsible for this and it is to be hoped that when the direct railway line from Lahore, *via* Sargodha, reaches Sargodha, the enhanced prosperity of the place will enable the municipal committee to fulfil its duties adequately. The committee is already reaping considerable benefit from the lorry traffic which runs from the town to Nurewala and up into the Salt Range.

HAFTI DRAFTSMAN D.B.
SARGODHA

PREFACE.

THIS volume is revised under the directions contained in Punjab Government letter No. 2279-Rev., dated the 14th June, 1928, and under the instructions received from the Director of Land Records, Punjab, in his letter No. 2112-1-29, dated 30th April, 1928. Every effort has been made to collect figures for all tables. Table No. 9 has been omitted under Director of Land Records' letter quoted above. Figures for table No. 17-A—Subsidiary Occupation of Agriculturists are not available as this information was not supplied by the Census Superintendent in his report. The prescribed uniformity has been duly observed.

Important events as required by paragraph 4 (*ii*) of Punjab Government letter No 670, dated 8th May, 1903.

Sargodha-Chiniot and Sargodha-Khushab Railway lines were constructed in the year 1929.

INDEX TO STATISTICAL TABLES.

TABLES

OF THE

SHAHPUR DISTRICT,

1934.

B

	1937-38 ..							

NOTES.—(1) The demand in column 3 will agree with that shown in column 6 of the Revenue Roll sanctioned for the year under review and the preceding year ,—*vide* paragraph 7 of Revised Circular No. 35. The collections in column 4 will be those of the demand shown in column 3 only.

(2) No difference whatever can be allowed between columns 4 of this return and 7 of the general Kistbandi.

(3) The income of estates not on the Kistbandi from their having lapsed within the year, or owing to the orders of Government not having been received on them, will be excluded.

(4) Again the revenue derived from estates under the Court of Wards or any other trust estates must not be entered either in the "Demand" or "Collections."

(5) In columns 8 and 9 only show remissions due to calamity of season. Remissions on account of diluvion, acquisition of land, &c., should be excluded.

(6) The numbers of the columns correspond with those of Land Revenue Report, Statement IV.
